student workbook 0 7668 0664 2 hospital infection is one of the major causes of morbidity and mortality following any procedure on the human body in the hospital infection arises primarily because of lack of knowledge by the hospital staff about sterilization today majority of super specialty hospitals import very expensive sterilizing equipment however very little effort is made to train the people who run these machines we must understand that the machine is as clever or as dumb as the person behind it unfortunately in spite of so many advances in health care and so many advances in medical education many countries do not have a single recognized training program to train sterilization technicians this is our effort in that direction to come up with a formal training program to train technicians in this vital area of health care delivery system this book shall benefit technologists and central sterile supplies department cssd staff as well as medical students and hospital administrators to understand the intricacies and workings of a successful cssd unit and contribute to hospital infection control in a large way this second edition is a comprehensive resource on sterilization and disinfection of reusable instruments and medical devices thoroughly revised and updated for its fourth edition this highly acclaimed volume is the most comprehensive reference on hospital epidemiology and infection control written by over 150 leading experts this new edition examines every type of hospital acquired nosocomial infection and addresses every issue relating to surveillance prevention and control of these infections in patients and in healthcare workers this new edition features new or significantly increased coverage of emerging infectious diseases avian
