COMOC 2: Two-dimensional Aerodynamics Sequence, Computer Program User's Guide 1977 fluorinated coatings and finishes handbook the definitive user s guide second edition addresses important frequently posed questions by end user design engineers coaters and coatings suppliers on fluorinated coatings and finishes thus enabling them to achieve superior product qualities and shorter product and process development times the book provides broad coverage of these fluorinated polymer coatings including the best known ptfe polytetrafluoroethylene first trademarked as teflon and eptfe goretex their inherent qualities of low surface tension non stick low friction high melting point and chemical inertness make fluoropolymer coatings widely desirable across thousands of industrial and consumer applications but these properties also make it difficult to convert fluoropolymers to coatings that have sufficient adhesion to the substrate to be protected in this book readers learn how fluoropolymer coatings are used and made about their pigments and fillers binders dispersion processes additives and solvents the book includes substrate preparation coating properties baking and curing processes performance tests applications and health and safety provides a practical handbook that covers the theory and practice of fluorinated coatings including the structure and properties of binders and how to get a non stick coating to stick to the substrate covers liquid and power fluorocoatings their applications methods curing and baking processes and their commercial end uses presents detailed discussions of testing methods related to fluorocoatings common coating defects how they form how to eliminate them and the health and safety aspects of using and applying fluorocoatings includes substrate preparation coating properties baking and curing processes performance tests applications and health and safety

2003-09 the material is contained in more than 500 datasheet articles each devoted exclusively to one particular alloy a proven format first used in the complementary guide for irons and steels for even more convenience the datasheets are arranged by alloy groups nickel aluminum copper magnesium titanium zinc and superalloys the book provides very worthwhile and practical information in such areas as compositions trade names common names specifications both u s and foreign available products forms typical applications and properties mechanical fabricating and selected others this comprehensive resource also covers the more uncommon alloys by groups in the same datasheet format included are refractory metals and alloys molybdenum tungsten niobium tantalum beryllium copper alloys cast and p m titanium parts p m aluminum parts lead and lead alloys tin rich alloys and sintering copper base materials copper tin bronze brass nickel silvers
