**International Macroeconomics in the Wake of the Global Financial Crisis**

2018-06-13 this book collects selected articles addressing several currently debated issues in the field of international macroeconomics they focus on the role of the central banks in the debate on how to come to terms with the long term decline in productivity growth insufficient aggregate demand high economic uncertainty and growing inequalities following the global financial crisis central banks are of considerable importance in this debate since understanding the sluggishness of the recovery process as well as its implications for the natural interest rate are key to assessing output gaps and the monetary policy stance the authors argue that a more dynamic domestic and external aggregate demand helps to raise the inflation rate easing the constraint deriving from the zero lower bound and allowing monetary policy to depart from its current ultra accommodative position beyond macroeconomic factors the book also discusses a supportive financial environment as a precondition for the rebound of global economic activity stressing that understanding capital flows is a prerequisite for economic policy decisions

*Archaeologies of the Heart* 2015-07-28

archaeological practice is currently shifting in response to feminist indigenous activist community based and anarchic critiques of how archaeology is practiced and how science is used to interpret the past lives of people inspired by the calls for a different way of doing archaeology this volume presents a case here for a heart centered archaeological practice heart centered practice emerged in care based disciplines such as nursing and various forms of therapy as a way to recognize the importance of caring for those on whom we work and as an avenue to explore how our interactions with others impacts our own emotions and heart archaeologists are disciplined to separate mind and heart a division which harkens back to the origins of western thought the dualism between the mental and the physical is fundamental to the concept that humans can objectively study the world without being immersed in it scientific approaches to understanding the world assume there is an objective world to be studied and that humans must remove themselves from that world in order to find the truth an archaeology of the heart rejects this dualism rather we see mind body

heart and spirit as inextricable an archaeology of the heart provides a new space for thinking through an integrated responsible and grounded archaeology where there is care for the living and the dead acknowledges the need to build responsible relationships with communities and with the archaeological record and emphasize the role of rigor in how work and research is conducted the contributions bring together archaeological practitioners from across the globe in different contexts to explore how heart centered practice can impact archaeological theory methodology and research throughout the discipline

Insomnia and beyond - Exploring the therapeutic potential of orexin receptor antagonists

2016-05-13 orexin hypocretin neuropeptides produced by a few thousand neurons in the lateral hypothalamus are of critical importance for the control of vigilance and arousal of vertebrates from fish to amphibians birds and mammals two orexin peptides called orexin a and orexin b exist in mammals they bind with different affinities to two distinct widely distributed excitatory g protein coupled receptors orexin receptor type 1 and type 2 oxr 1 2 the discovery of an oxr mutation causing canine narcolepsy the narcolepsy like phenotype of orexin peptide knockout mice and the orexin neuron loss associated with human narcoleptic patients laid the foundation for the discovery of small molecule oxr antagonists as novel treatments for sleep disorders proof of concept studies from glaxo smith kline actelion pharmaceuticals ltd and merck have now consistently demonstrated the efficacy of dual oxr antagonists doras in promoting sleep in rodents dogs non human primates and humans some of these antagonists have completed late stage clinical testing in primary insomnia orexin drug discovery programs have also been initiated by other large pharmaceutical companies including hoffmann la roche novartis eli lilly and johnson johnson orexins are increasingly recognized for orchestrating the activity of the organism s arousal system with appetite reward and stress

processing pathways therefore in addition to models of insomnia pharmacological effects of doras have begun to be investigated in rodent models of addiction depression and anxiety the first clinical trials in diabetic neuropathy migraine and depression have been initiated with merck s mk 6096 clinicaltrials.gov whereas the pharmacology of doras is established for their effects on wakefulness pharmacological effects of selective oxr 1 or oxr 2 antagonists soras have remained less clear from an evolutionary point of view the oxr 2 was expressed first in most vertebrate lineages whereas the oxr 1 is believed to result from a gene duplication event when mammals emerged yet both receptors do not have redundant function their brain expression pattern their intracellular signaling as well as their affinity for orexin a and orexin b differs during the past decade most preclinical research on selective oxr 1 antagonism was performed with sb 334867 only in recent years other selective oxr 1 and oxr 2 antagonists with optimized selectivity profiles and pharmacokinetic properties have been discovered and phenotypes of oxr 1 and oxr 2 knockout mice were described the present research topic referred to in the editorial as special topics issue comprises submissions of original research manuscripts as well as reviews directed towards the neuropharmacology of oxr antagonists the submissions are preclinical papers dealing with dual and or selective oxr antagonists that shed light on the differential contribution of endogenous orexin signaling through both oxrs for cellular physiological and behavioral processes some manuscripts also report on convergence or divergence of dora vs sora effects with phenotypes expressed by oxr 1 or oxr 2 knockout animals ultimately these findings may help further define the potential of doras and soras in particular therapeutic areas in insomnia and beyond insomnia

systems affect the corresponding fuel requirements because the book is for a global market fuel system technologies that only exist in the legacy fleet in some markets are included the way in which fuel requirements are developed and specified is discussed this covers test methods from simple laboratory bench tests through engine testing and long term test procedures isbn 9781468605785 isbn 9781468605792 isbn 9781468605808 doi 10 4271 9781468605792

*Corrosion and Corrosion Protection of Wind Power Structures in Marine Environments 2019-12-27*

corrosion and corrosion protection of wind power structures in marine environments volume 2 corrosion protection measures offers the first comprehensive review on corrosion and corrosion protection of offshore wind power structures the book extensively discusses corrosion phenomena and corrosion types in different marine corrosion zones including the modeling of corrosion processes and interactions between corrosion and structural stability the book addresses important design issues namely materials selection relevant to their performance in marine environments corrosion allowance and constructive design active and passive corrosion protection measures are emphasized with special sections on cathodic corrosion protection and the use of protective coatings seawater related issues associated with cathodic protection such as calcareous deposit formation hydrogen formation and fouling are discussed with respect to protective coatings the book considers for the first time complete loading scenarios including corrosive loads mechanical loads and special loads and covers a wide range of coating materials problems associated with fouling and bacterial induced corrosion are extensively reviewed the book closes with a chapter on recent developments in maintenance strategies inspection techniques and repair technologies the book will

be of special interest to materials scientists materials developers corrosion engineers maintenance engineers civil engineers steel work designers mechanical engineers marine engineers chemists and coating specialists offshore wind power is an emerging renewable technology and a key factor for a cleaner environment offshore wind power structures are situated in a demanding and challenging marine environment the structures are loaded in a complex way including mechanical loads and corrosive loads corrosion is one of the major limiting factors to the reliability and performance of the technology maintenance and repair of corrosion protection systems are particularly laborious and costly explores the literature between 1950 and 2020 and contains over 2000 references offers the most complete monograph on the issue covers all aspects of corrosion protection in detail including coatings cathodic protection corrosion allowance constructive design as well as maintenance and repair delivers the most complete review on corrosion of metals in marine offshore environments focuses on all aspects of offshore wind power structures namely foundations towers internal sections connection flanges and transformation platforms

Discrimination, Vulnerable Consumers and Financial

Inclusion 2017-01-25 this book addresses the questions of discrimination vulnerable consumers and financial inclusion in the light of the emerging legal socioeconomic and technological challenges new technologies such as artificial intelligence driven consumer credit risk assessment and fintech platforms the changing nature of vulnerability due to the ongoing covid 19 pandemic as well as the sophistication of digital technologies which help circumvent legal barriers and protections necessitate the continuous study of the existing legal frameworks and measures that are capable of tackling these challenges organized in two major parts the first addresses from multiple national angles the idea of a human rights approach to consumer law in order to replace the mantra of economic efficiency that characterizes financial services with those of human dignity and freedom from discrimination and from debt induced servitude the second tackles the challenges posed by increased usage of technology in connection with financial services which tends to solve but also creates additional issues for consumers in general and for vulnerable groups in particular

Public Relations in the Nonprofit Sector

2017-04-28 nonprofit organizations are managing to carry out sophisticated public relations programming that cultivates relationships with their key audiences their public relations

challenges however have routinely been understudied budgetary and staffing restraints often limit how these organizations carry out their fundraising public awareness and activism efforts and client outreach this volume explores a range of public relations theories and topics important to the management of nonprofit organizations including crisis management communicating to strengthen engagement online and offline and recruiting and retaining volunteer and donor support

**Progress in Episodic Memory Research** episodic memory refers to the ability to remember personal experiences in terms of what happened and where and when it happened humans are also able to remember the specific perceptions emotions and thoughts they had during a particular experience this highly sophisticated and unique memory system is extremely sensitive to cerebral aging neurodegenerative and neuropsychiatric diseases the field of episodic memory research is a continuously expanding and fascinating area that unites a broad spectrum of scientists who represent a variety of research disciplines including neurobiology medicine psychology and philosophy nevertheless important questions still remain to be addressed this research topic on the progress in episodic memory research covers past and current directions in research dedicated to the neurobiology neuropathology development measurement and treatment of episodic memory

*Adapting to Climate Change* this book examines the water related impacts of climate change in the unesco intercontinental biosphere reserve of the mediterranean ibrm straddling spain and morocco this is the first in depth publication on a fascinating transboundary case study while climate change effects are rather homogenous across the ibrm differing socio economic contexts land use patterns and policy frameworks in spain and

morocco mean considerable variations in vulnerability and consequences for human security the authors have produced a novel and integrated vulnerability assessment that combines hydro ecological socio economic and policy analyses the interdisciplinary approach and insights contained in this volume will appeal both to those interested in the integration of natural and social sciences as well as those working on water and climate change from academic practical or policy oriented perspectives
