adam smith s invisible hand relied on the self interest of individuals to produce good outcomes economists belief in efficient markets took this idea further by assuming that all individuals are selfish this belief underpinned financial deregulation and the theories on incentives and performance which supported it however although adam smith argued that although individuals may be self interested he argued that they also have other regarding motivations including a desire for the approbation of others this book argues that the trust intensive nature of financial services makes it essential to cultivate such other regarding motivations and it provides proposals on how this might be done trustworthiness in the financial services industry was eroded by deregulation and by the changes to industry structure which followed incentive structures encouraged managers to disguise risky products as yielding high returns and regulation failed to curb this risk taking rent seeking behaviour the book makes a number of proposals for reforms of governance and of legal and regulatory arrangements to address these issues the proposals seek to harness values and norms that would reinforce other regarding behaviour so that the firms and individuals in the financial services act in a more trustworthy manner four requirements are identified which together might secure more strongly trustworthy behaviour the definition of obligations the identification of responsibilities the creation of mechanisms which encourage trustworthiness and the holding to account of those involved in an appropriate manner financial reforms at present lack sufficient focus on these requirements and the book proposes a range of further actions for specific parts of the financial industry

when there are too many choices there is no choice the choices are entangled in a maze of rather confused possibilities they go through many nebulous paths doubt hesitation indecision become the only resolutions possible choosing is the anxiety of being wrong the brand the quality price ratio the aesthetics give confidence but often with naivety there is a gap between the reality of the qualities of the products and the perception of the customer these are prejudices illusions a lack of knowledge generally speaking is the consumer client able to appreciate by sight by touch or even by a brief trial of operation all the strengths and weaknesses a lot of products market value dominates the use value marketing will discover that we must no longer confuse the consumer the customer and the user the economic system only works because consumers are in the opacity of their choices the search for technical prowess and above all market value has dominated the search for value in use

taking as its focus memorials of the first world war in britain this book brings a fresh approach to the study of public symbols by exploring how different motives for commemorating the dead were reconciled through the processes of local politics to create a widely valued form of collective expression it examines how the memorials were produced what was said about them how support for them was mobilized and behaviour around them regulated these memorials were the sites of contested multiple and ambiguous meanings yet out of them a united public observance was created the author argues that this was possible because the interpretation of them as symbols was part of a creative process in which new meanings for traditional forms of memorial were established and circulated the memorials not only symbolized emotional responses to the war but also ambitions for the post war era contemporaries adopted new ways of thinking about largely traditional forms of memorial to fit the uncertain social and political climate of the inter war years this book represents a significant contribution to the study of material culture and memory as well as to the social and cultural history of modern warfare
