Cellular molecular medicine is an open access journal publishing recent findings that elucidate disease pathogenesis at the molecular or physiological level which may lead to the design of specific tools for disease diagnosis treatment or prevention. Cellular molecular medicine is a broad field where physical chemical biological bioinformatics and medical techniques are used to describe molecular structures and mechanisms identify fundamental molecular and genetic errors of cellular molecular medicine sits at the forefront of its field rapidly disseminating discovery in the genetic molecular and cellular basis of physiology and disease. 2024-05-16 fluorescence guided surgery fgs with molecular targeted probes offers a valuable tool to guide tumor resection however identifying suitable tumor specific probes can be challenging to ease fgs probe screening an organoid. The journal of molecular medicine is a renowned journal focusing on basic findings from disease pathogenesis to therapy research across all human diseases studies based on model organisms are considered if relevant to trends in molecular medicine objective is to provide concise and contextualized views on the latest research moving biomedical science closer to improved diagnosis treatment and prevention of human diseases.
