published in 1987 the shaping of modern psychology presents a systematic survey of the development of psychology from the dawn of civilization to the late 1980s psychology as we find it today has been shaped by many influences philosophical theological scientific medical and sociological it has deep roots in the whole history of human thought and its significance cannot be properly appreciated without an understanding of the way it has developed this book covers the history of modern psychology from its animistic beginnings through the greek philosophers and the christian theologians and developments such as the scientific revolution to the time of first publication the author drew on many years teaching experience in the subject and on a lifetime's interest in psychology the growth of psychology had been particularly impressive during the twentieth century and professor hearnshaw also looked to the future of the discipline he showed that the new vistas opening out in fields such as neuropsychology information theory and artificial intelligence for example were hopeful indications for the future provided the lessons of the past were not forgotten with the benefit of hindsight we now know that he was right this study fills a gap in standardization literature it is the first academic analysis of national standardization organizations these organizations exist in every country and may be private or governmental organizations the first national standardization organizations were founded in the early decades of the 20 century and were aimed at rationalizing industrial production their mode of operation reflects the sense of co operation at the national level and in the telecommunications and electrotechnical field at the international level as well now however the scene has changed with companies operating internationally standards for products processes and services are crucial factors in determining success or failure on a fiercely competitive market especially when functional compatibility is a prerequisite as is the case in computer and telecommunications technologies as a consequence rather homogeneous needs of

participants in standardization have given way to conflicting interests this prompts a discussion about the traditional role of national standardization organizations they increasingly depend on their exclusive links to the international standardization organizations iso and iec and in the case of europe the regional organizations cen and cenelec in many cases formal standardization organizations are not the obvious bodies for developing standards to meet business needs is this inevitable or could they improve performance and regain their market share henk de vries answers this question
