metallurgica conference held in sonnenberg germany on september 19 23 1983 contributors discuss the early stages of decomposition in alloys placing emphasis on the unsolved problems

of the field rather than on the solved ones this book has 36 chapters and opens with a discussion on developments in the theory of the kinetics of first order phase transitions followed by an analysis of metastability and spinodal nucleation neutron scattering during decomposition of aluminum alloys ostwald ripening of precipitates and phase stability under irradiation the next chapters explore decomposition processes in al zn alloys thermal decomposition in cu ni fe alloys and the initial stages of discontinuous precipitation reactions other papers focus on the mechanisms of plate precipitate growth spinodal decomposition and continuous ordering and early stages of decomposition in ni al single crystals this monograph will be of interest to students and practitioners of physics and metallurgy during the last 10 years more and more linguistic and psycholinguistic research has been devoted to the study of discourse and written texts much of this research deals with the markers that underline the connections and the breaks between clauses and sentences plus the use of these markers by adults and children in the production and comprehension of oral and written material in this volume major observations and theoretical views from both sides of the atlantic are brought together to appeal to a wide range of linguists psychologists and speech therapists the volume presents contributions from researchers interested specifically in adult language and from others concerned with developmental aspects of language some contributors deal primarily with production whereas others concentrate on comprehension some direct their attention to oral discourse while others focus on written texts to preserve overall coherence however the contributors were given the following recommendations with regard to the level of linguistic analysis the emphasis should be on the clause level more particularly on the relationships between clauses special emphasis should also be placed on linguistic markers e g connectives markers of segmentation punctuation an overview of a given field of research should be offered and current research should be put into perspective for contributors in the developmental field attention should be paid to the fact that an account of the acquisition of some language functions throughout childhood should be included only if general principles of interclause relations that might be masked by the exclusive examination of adult evidence could be derived from it epigenetics is a new field that explains gene expression at the chromatin structure and organization level three principal epigenetic mechanisms are known and hundreds of combinations among them can develop different phenotypic characteristics dna methylation histone modifications and small rnas have been identified and their functions are being studied in order to understand the mechanisms of interaction and regulation among the different biological processes in plants although fundamental epigenetic mechanisms in crop plants are beginning to be elucidated the comprehension of the different epigenetic mechanisms by which plant gene regulation and phenotype are modified is a major topic to develop in the near future in order to increase crop productivity thus the importance of epigenetics in improving crop productivity is undoubtedly growing current research on epigenetics suggest that dna methylation histone modifications and small rnas are involved in almost every aspect of plant life including agronomically important traits such as flowering time fruit development responses to environmental factors defense response and plant growth the aim of this research topic is to explore the recent advances concerning the role of epigenetics in crop biotechnology as well as to enhance and promote interactions among high quality researchers from different disciplines such as genetics cell biology pathology microbiology and evolutionary biology in order to join forces and decipher the epigenetic mechanisms in crop productivity this volume addresses the assessment of the most commonly encountered disorders or conditions among adults older adults and couples evidence based strategies and instruments for assessing mood disorders anxiety disorders couple distress and sexual problems health related problems and many other conditions are covered in depth with a focus throughout on assessment instruments that are feasible psychometrically sound and useful for typical clinical practice a rating system has been
