please note this is a companion version not the original book sample book insights 1 i had a lot of fun with radios i started with a crystal set that i bought at the store and i used to listen to it at night in bed while i was going to sleep through a pair of earphones one night my mother and father came home from a night out and very very quietly took the earphones off me the radio blew a fuse and the bell went off with a helluva racket 2 i built an amplifier for a photo cell that could make a bell ring when i put my hand in front of it i bought radios at rummage sales i didn't have any money but it wasn't expensive i would fix them and then sell them 3 when a person has been negative to you and then you do something like that they're usually a hundred percent the other way to compensate they'll usually tell everyone how great you are and how you fixed the radio by thinking 4 i have a puzzle drive that explains my desire to decipher mayan hieroglyphics or open safes i was always known for solving puzzles in high school and i continued doing so at mit

computational properties of use to biological organisms or to the construction of computers can emerge as collective properties of systems having a large number of simple equivalent components or neurons the physical meaning of content addressable memory is described by an appropriate phase space flow of the state of a system a model of such a system is given based on aspects of neurobiology but readily adapted to integrated circuits the collective properties of this model produce a content addressable memory which correctly yields an entire memory from any subpart of sufficient size the algorithm for the time evolution of the state of the system is based on asynchronous parallel processing additional emergent collective properties include some capacity for generalization familiarity recognition categorization error correction and time sequence retention the collective properties are only weakly sensitive to details of the modeling or the failure of individual devices

in rethinking thought laura otis gives readers a multi dimensional tour through the minds of thirty creative thinkers to illustrate how the experience of productive thought can vary across the spectrum focusing on individual experiences with planning problem solving reflecting remembering and forging new ideas otis approaches the question of what thinking is by analyzing variations in the way thinking feels drawing from her own experience as a neuroscientist turned literary scholar otis aptly juxtaposes creative thinkers insights with recent neuroscientific discoveries centering on visual mental imagery verbal language and thought by offering distinct psychological portraits of famous figures like controversial novelist salman rushdie and engineer temple grandin otis treats scientists and artists with equal respect and creates a fascinating dialogue in which neuroscientific findings and introspection engage with each other as equal partners rethinking thought encourages readers to resist the temptation of classifying people as visual or verbal and to instead consider how thinkers combine both skill sets and how their abilities can be further developed as a result by showing how greatly individual experiences of thought can vary this book aims to help readers in all professions better understand the diverse pool of people with whom they work and interact with page 4 of cover

a passion for truth is an intimate account of john huntington s interior life as a physical scientist and as a priest in mid career as a scientist he experienced a sudden and undeniable call to the priesthood it became imperative to work to reconcile his two vocations within a single worldview this plunged him into an intense reflection on the authority of physical science and the trustworthiness of religious experience he could not turn away from the question this book is the result the author uncovered a number of fallacies embedded in our western culture that serve to impede spiritual formation and to

discourage the faithful at the root of them all is the idea that it is acceptable to be careless with the truth in liberal academic circles this is called postmodernism in theology it is called relativism in physical science it is called scientism he concluded that if striving for clear thinking is our loving response to our creator who endowed us with intellect then loose thinking permissive thinking untruth relativism could not be from god it cannot be condoned huntington wants to awaken in us a passion for truth and in doing so he wants to comfort us and bring us hope
