this work presents one of the original and fundamental experiments of didactique a research program whose underlying tenet is that mathematics education research should be solidly based on scientific observation here the observations are of a series of adventures that were astonishing for both the students and the teachers the reinvention of fractions and of decimal numbers in a sequence of lessons and situations that permitted the students to construct the concepts for themselves the book leads the reader through the highlights of the sequence s structure and some of the reasoning behind the lesson choices it then presents explanations of some of the principal concepts of the theory of situations in the process it offers the reader the opportunity to join a lively set of fifth graders as they experience a particularly attractive set of lessons and master a topic that baffles many of

their contemporaries

Increased attention is being paid to the need for statistically educated citizens. Statistics is now included in the K-12 mathematics curriculum. Increasing numbers of students are taking courses in high school and introductory statistics courses are required in college. However, increasing the amount of instruction is not sufficient to prepare statistically literate citizens. A major change is needed in how statistics is taught to bring about this change. Three dimensions of teacher knowledge need to be addressed: their knowledge of statistical content, their pedagogical knowledge, and their statistical pedagogical knowledge, i.e., their specific knowledge about how to teach statistics. This book is written for mathematics and statistics educators and researchers. It summarizes the research and highlights the

important concepts for teachers to emphasize and shows the interrelationships among concepts it makes specific suggestions regarding how to build classroom activities integrate technological tools and assess students learning this is a unique book while providing a wealth of examples through lessons and data sets it is also the best attempt by members of our profession to integrate suggestions from research findings with statistics concepts and pedagogy the book s message about the importance of listening to research is loud and clear as is its message about alternative ways of teaching statistics this book will impact instructors giving them pause to consider is what i m doing now really the best thing for my students what could i do better j michael shaughnessy professor dept of mathematical sciences portland state university usa this is a much needed text for linking research and practice in teaching statistics the authors have provided a comprehensive overview of the current state of the art in statistics education research the insights they have gleaned from the literature should be tremendously helpful for those involved in teaching and researching introductory courses randall e groth assistant professor of mathematics education salisbury university usa
