on a large or small scale for rural and urban areas as the drainage engineer must decide how much unwanted water there will be and when it will occur the chapter discusses climatic types prediction of rainfall evapotranspiration effects return periods of design storms and runoff events river flow and flood prediction and various sensing systems for providing short term predictions of rainfall runoff streamflow and flood warning chapter 2 gives a thorough review of the properties of soil in the context of drainage design the extensive mathematical theories which relate to the crucial area of soil water movement are outlined and due attention is paid to the growing importance of predicting soil water movement in partially saturated soils
