## ***Le tombeau du Pharaon en l'an 2800 av. J.-C.***

1955

il y a plus de 4500 ans les égyptiens ont élevé des monolithes d une trentaine de tonnes sur les gradins de la pyramide de kheops haute de 138 mètres comment les maîtres d œuvre ont ils pu surmonter l insuffisance de leurs moyens techniques et scientifiques pour satisfaire la volonté du pharaon cette énigme continue de défier l imagination des archéologues et des architectes ni les vestiges des monuments ni les hiéroglyphes ne permettent en effet de percer le mystère du transport de ces gigantesques blocs de pierre comme si ces antiques artisans avaient voulu préserver à jamais leur secret face à cette question apparemment insoluble nombreux sont ceux de nos contemporains qui ont été tentés de se réfugier dans des explications relevant du surnaturel loin de ces récits fantaisistes louis albertelli nous propose une reconstitution romancée mais constamment vérifiée par des données scientifiques de la formidable aventure de ces constructeurs d éternité ingénieur des travaux publics il nous apporte des thèses inédites sur les procédés de construction recourant aux connaissances théoriques des bâtisseurs égyptiens de l époque il parvient à restituer les diverses phases de cette parfaite synergie entre l homme et la matière par ses démonstrations mathématiques et physiques par ses expérimentations louis albertelli prouve que la combinaison des machines de bois évoquées par héraclite d halicarnasse et des terrasses décrites par diodore de sicile a bel et bien suffi pour réaliser ce que l humanité considère désormais comme l une des sept merveilles du monde

## **Pyramide**

2006

Pyramide de Kheops, la plus grande pyramide d'Égypte, a été construite par le pharaon Khéops vers 2500 av. J.-C. Elle est l'une des sept merveilles du monde antique. Sa construction est restée un mystère pendant des siècles, mais des recherches modernes ont permis de mieux comprendre les techniques utilisées. Les blocs de pierre, pesant jusqu'à 2,5 millions de kilogrammes, ont été transportés sur de longues distances à l'aide de machines à vapeur et de systèmes de levage complexes. La pyramide est constituée de plusieurs couches de blocs, avec une structure interne qui permet de mieux comprendre son architecture. Elle est aujourd'hui un des plus grands monuments de l'Égypte antique et un des plus grands sites touristiques du monde.

in this book egyptian archeology and mathematics meet the author is an expert in theories and applications in solid mechanics and inverse problems a former professor at ecole polytechnique and now works with electricité de france on maintenance operations on nuclear power plants in the autumn of 1986 after the end of the operation on the king s chamber conducted under the technological and scientific sponsorship of edf to locate a cavity he was called to solve a mathematical inverse problem to find the unknown tomb of the king and the density structure of the whole pyramid based on measurements of microgravity made inside and outside of the pyramid this book recounts the various search operations on the pyramid of cheops made at the request of the egyptian and french authorities in 1986 1987 after the premature end of the cheops operation in the autumn of 1986 following the fiasco of unsuccessful drillings in the area suspected by both architects g dormion and j p goidin and microgravity auscultation edf and cpfg a geophysical company teams continued their researches with measurements already made trying this time an inversion of the newton gravity equation for the entire pyramid and using another theoretical team led by the author the inverse problem solution confirmed the results of auscultations but found no cavity however the image of the average density at the surface of the entire pyramid forms a sort of square spiral probably related to the construction method in 2000 jean pierre houdin considered the author s results of 1988 as a confirmation of his theory of the internal ramp tunnel since then the author has done additional research and found that classical theories of the construction based on degrees and the particular mode of stones filling can also report the same densitogram the book is richly illustrated with color figures it is dotted with information concerning physics mechanics and the history of egyptian antiquities the book ends with the greatest mystery of the

pyramid about the unknown tomb of the king and a dream to see the tomb at an unexpected place

from an egyptian priest and these he has recorded with much particularity his own appreciation of the structure and of the causeway over which the materials were conveyed was that of wonder and admiration homer does not seem to make any allusion to it perhaps for the reason that it had no connection with mythology or with any of his heroes eratosthenes 236 b c diodorus siculus 60 b c and strabo and pliny about the beginning of our era all wrote of it the latter in referring to the pyramids also says the authors who have written upon them are herodotus euhemerus durius samius aristagoras dionysius artemedorus alexander polyhistor butorides autisthenes demetrius demoteles and apion see rawlinson s herodotus book ii chap 124 vol 2 pp 169 176 but though the great pyramid has been standing in its place for 4000 years it is only within a very recent period that there has been any rational appreciation of it for 3000 years of its existence up to the time of the mediaeval caliph al mamoun no mortal man perhaps ever penetrated into its upper passages and main openings certainly for many centuries before him it was completely closed up no entrance to it being known any more to any human being this son of haroun al raschid of the arabian nights flattered and almost worshipped as a god was so wrought upon by the romancers
