craft point of view this book provides an in depth guide to security in wireless ad hoc and sensor networks security in wireless ad hoc and sensor networks introduces the reader to the fundamentals and key issues related to wireless ad hoc networking with an emphasis on security it discusses the security attacks and counter measures in wireless ad hoc sensor and mesh networks and briefly presents the standards on related topics the authors offer a clear exposition of various challenges and solutions in this field including bootstrapping key distribution and exchange authentication issues privacy anonymity and tamper resilience key features introduces the fundamentals and key issues of the new technologies followed by comprehensive presentation on security attacks and counter measures covers denial of service dos attacks hardware aspects of secure wireless ad hoc and sensor networks and secure routing contains information on cryptographic primitives and electronic warfare includes problems at the end of each chapter to enhance learning this book is well suited for graduate students in computer electrical and communications engineering and computer science departments researchers in academia and industry as well as c4i engineers and officers in the military wireless network designers for internet service providers and mobile communications operators will also find this book very useful this book includes the original peer reviewed research papers from the 2nd international conference on electrical systems technology and information icesti 2015 held in september 2015 at patra jasa resort villas bali indonesia topics covered include mechatronics and robotics circuits and systems power and energy systems control and industrial automation and information theory it explores emerging technologies and their application in a broad range of engineering disciplines including communication technologies and smart grids it examines hybrid intelligent and knowledge based control embedded systems and machine learning it also presents emerging research and recent application in green energy system and storage it discusses the role of electrical engineering in biomedical industrial and mechanical systems as well as multimedia systems and applications computer vision and image and signal processing the primary objective of this series is to provide references for dissemination and discussion of the above topics this volume is unique in that it includes work related to hybrid intelligent control and its applications engineers and researchers as well as teachers from academia and professionals in industry and government will gain valuable insights into interdisciplinary solutions in the field of emerging electrical technologies and its applications this book constitutes the refereed proceedings of the 13th portuguese conference on artificial intelligence epia 2007 held in guimarões portugal in december 2007 as eleven integrated workshops the 58 revised full papers presented were carefully reviewed and selected from a total of 210 submissions in accordance with the eleven constituting workshops the papers are organized in topical sections on a broad range of subjects this book covers the entire field of satellite geodesy and is intended to serve as a textbook for advanced undergraduate and graduate students as well as a reference for professionals and scientists in the fields of engineering and geosciences such as geodesy surveying engineering geomatics geography navigation geophysics and oceanography the text provides a systematic overview of fundamentals including reference systems time signal propagation and satellite orbits together with observation methods such as satellite laser ranging satellite altimetry gravity field missions very long baseline interferometry doppler techniques and global navigation satellite systems gnss particular emphasis is given to positioning techniques such as the navstar global positioning system gps and to applications numerous examples are included which refer to recent results in the fields of global and regional control networks gravity field modeling earth rotation and global reference frames crustal motion monitoring cadastral and engineering surveying geoinformation systems land air and marine navigation marine and glacial geodesy and emerging internet data and technologies and their applicability in businesses engineering and academia focusing on advances in the life cycle exploitation of data generated from the digital ecosystem data technologies that create value e g for businesses toward a collective intelligence approach the internet has become the most proliferative platform for emerging large scale computing paradigms among these data and web technologies are two of the most prominent paradigms and are found in a variety of forms such as data centers cloud computing mobile cloud and mobile services these technologies together create a digital ecosystem whose cornerstone is the data cycle from capturing to processing analyzing and visualizing the investigation of various research and development issues in this digital ecosystem are made more pressing by the ever increasing requirements of real world applications that are based on storing and processing large amounts of data the book is a valuable resource for researchers software developers practitioners and students interested in the field of data and web technologies how the chinese government brutally deals with a democratic uprising rapidly escalates and within weeks brings mankind towards the edge of extinction in the locust event dr jaime jones an executive at cleanetics biomedical research and her former harvard classmate and good friend distinguished virologist dr shing shen battle for not only their lives but those of every human on the planet as they seek answers to this seemingly unstoppable threat from the concrete jungles of southern california to an ancient shao lin monastery in northern china and from the rugged beauty of the pacific northwest ultimately to the warmth and lushness of hawaii the fate of humankind is revealed both the richness and the depravity of the human spirit are exposed as our species engages in the ultimate fight the fight to survive location based services lbss are mobile services for providing information that has been created compiled selected or filtered under consideration of the users current locations or those of other persons or mobile devices typical examples are restaurant finders buddy trackers navigation services or applications in the areas of mobile marketing and mobile gaming the attractiveness of lbss is due to the fact that users are not required to enter location information manually but are automatically pinpointed and tracked this book explains the fundamentals and operation of lbss and gives a thorough introduction to the key technologies and organizational procedures offering comprehensive coverage of positioning methods location protocols and service platforms alongside an overview of interfaces languages apis and middleware with examples demonstrating their usage explanation and comparison of all protocols and architectures for location services in depth coverage of satellite cellular and local positioning all embracing introduction to 3gpp positioning methods such as cell id e otd u tdoa otdoa ipdl and assisted gps explains the operation of enhanced emergency services such as e 911 identifies unsolved research issues and challenges in the area of lbss this comprehensive guide will be invaluable to undergraduate and postgraduate students and lecturers in the area of telecommunications it will also be a useful resource to developers and researchers seeking to expand their knowledge in this field an instant new york times bestseller the untold stories behind the office one of the most iconic television shows of the twenty first century told by its creators writers and actors when did you last hang out with jim pam dwight michael and the rest of dunder mifflin it might have been back in 2013 when the series finale aired or it might have been last night when you watched three episodes in a row but either way long after the show first aired it s more popular than ever and fans have only one problem what to watch or read next fortunately rolling stone writer andy greene has that answer in his brand new oral history the office the untold story of the greatest sitcom of the 2000s greene will take readers behind the scenes of their favorite moments and characters greene gives us the true inside story behind the entire show from its origins on the bbc through its impressive nine season run in america with in depth research and exclusive interviews fans will get the inside scoop on key episodes from the dundies to threat level midnight and goodbye michael including behind the scenes details like the battle to keep it on the air when nbc wanted to pull the plug after just six episodes and the failed attempt to bring in james gandolini as the new boss after steve carell left spotlighting the incredible genre redefining show created by the family like team who together took a quirky british import with dicey prospects and turned it into a primetime giant with true historical and cultural significance hilarious heartwarming and revelatory the office gives fans and pop culture buffs a front row seat to the phenomenal sequence of events that launched the office into wild popularity changing the face of television and how we all see our office lives for decades to come this book examines the use of big

data in regenerative urban environment and how data helps in functional planning and design solutions this book is one of the first endeavors to present the data driven methods for regenerative built environments and integrate it with the novel design solutions it looks at four specific areas in which data is used urban land use transportation and traffic environmental concerns and social issues and draws on the theoretical literature concerning regenerative built environments to explain how the power of big data can achieve the systematic integration of urban design solutions it then applies an in depth case study method on asian metropolises including beijing and tehran to bring the developed innovation into a research led practical context this book is a useful reference for anyone interested in driving sustainable regeneration of our urban environments through big data centric design solutions
