henrietta stockel describes chiricahua beliefs and ceremonies before going on to recount the conditions of the spanish colonial frontier at the moment of conquest subsequent chapters trace events that culminated in the surrender of the chiricahua apaches in 1886 the twenty seven years of incarceration as american prisoners of war in florida alabama and oklahoma and the life changing consequences of the children s education in government sponsored boarding schools stockel portrays an unbroken sequence of economic motivations on the part of the spanish mexican and american governments each eager to expand their respective territories equally unbroken was the resistance of the apaches to indoctrination according to stockel the chiricahua apaches never completely surrendered their traditional religion to christianity like other syncretistic religions their beliefs incorporated aspects of christian dogma even while they protected their own religion from outsiders this is a complicated story rich in cross cultural encounters on the battlefield in mission churches and in the classroom stockel s research and writing bring to life the fierce resistance of a heroic people simple solutions for planet earth is a scientific book written in a popular style for the average reader you have read about peak oil and global climate warming and complained about 4 gallon gasoline but how really serious are these headlines and annoyances the author has worked his entire career on the science technology education administration and politics of these subjects and crystallizes this complex field into understandable elements providing simple solutions for humanity does it make sense for the renewable energy budget of the federal government to be about 1 billion year when o annual tax incentives and government programs for the oil industry are supposedly in the range between 38 billion and 115 billion although lester brown says 210 billion in 2005 o farm subsidies alone in 2004 cost taxpayers 16 2 billion o our country spends 12 billion a month or 144 billion year on the iraq and afghanistan wars ostensibly to protect oil only to raise prices the author s long experience with the greenhouse effect has led him to believe that methane not carbon dioxide could well be the critical gas of concern for there is potential for global warming to cascade into what he terms the venus syndrome the closing chapter speculates on a hypothesis regarding mega tsunamis 100 meter waves from landslides while simple solutions are suggested the problem is the inability of our civilization to agree on a workable strategy which is further weakened by the lack of will on part of the general populace thus the reader is urged to help make that crucial difference instructions and examples are provided on how to attain rainbow vision to carry out this mission for a better planet earth the simplest solution is for everyone to join in on the effort praise for fourth edition vital assumptions have been emphasised by delineating the models which are used for the subsequent analyses implicitly statements have also been made about topics or aspects which this study does not cover for example all workers and firms are identical ex ante however ex post differences are allowed for inter alia if unemployment occurs or if some firms have to close down these restrictions indicate areas of future research insofar as that the findings for homogeneous workers or firms yield an unambiguous proposal for changes in tax rates or the tax structure in order to promote employment this is because it would be desirable for tax policy to know whether the predicted effects also hold in a world with ex ante heterogeneity furthermore the product market has not played a role therefore repercussions from labour markets outcomes on product demand and vice versa are absent 55 moreover neither the process of capital accumulation be it physical or human capital nor substitution possibilities between labour and capital in the firms production function are taken into account finally international competition is not modelled considers h r 6294 to amend the
