experimental cell research is a journal of cell biology that aims to provide significant insights into the organisation and activity of cells in both tissue culture assays as well as in animal models not the least in models that experimental research serves as a fundamental scientific method aimed at unraveling cause and effect relationships between variables across various disciplines this paper experimental research is a powerful tool for understanding cause and effect relationships it allows us to manipulate variables and observe the effects which is crucial for understanding how different factors influence the outcome of a study but the importance of experimental research goes beyond that an experimental research design helps researchers execute their research objectives with more clarity and transparency in this article we will not only discuss the key aspects of experimental research designs but also the issues to avoid and problems to resolve while designing your research study experiments are used to study causal relationships you manipulate one or more independent variables and measure their effect on one or more dependent variables experimental design create a set of procedures to systematically test a hypothesis a good experimental design requires a strong understanding of the exploratory research where the goal of the study is to examine cause effect relationships it also works well for research that involves a experimental research differs from other research approaches as it has greater control over the objects of its study when you conduct experimental research you are not going to merely describe a condition determine the status study experimental or research design is the backbone of good research it directs the experiment by orchestrating data collection defines the statistical analysis of the resultant data and guides the interpretation of the results this section we specifically address the elements that make experimental research a discrete research design differentiated from others next to the characteristics of experimental research we address the main issues and decisions to be made within this research design and the major pitfalls
