A pressure vessel is a container designed to hold gases or liquids at a pressure substantially different from the ambient pressure. Construction methods and materials may be chosen to suit the pressure application and will depend on the size of the vessel, the contents, working pressure, mass constraints, and the number of items required.

## **Pressure Vessels Design and Applications Sep 26 2023**

Pressure vessels are containers designed to hold fluids or gases at high pressures. They are commonly used in industrial settings, such as chemical processing, oil and gas production, and power generation. The design and construction of pressure vessels are highly regulated to ensure safety and reliability. This document provides a comprehensive overview of pressure vessel design, including types, materials, and applications.

2024-3-8 a pressure vessel is a closed leak tight container normally cylindrical or spherical designed to hold fluids i e gases liquids or two phase fluids at a pressure substantially different higher or lower from the ambient pressure they are usually made from carbon steel or stainless steel and assembled from plates by welding method
