Tropical Horticulture and Gardening 2006 volume 2 of this revised edition of tropical fruits examines the more specialist tropical fruits such as guava durian mangosteen passion fruits and palm fruits with growing interest in the cultivation production study sales and marketability of these specialist fruits this is a timely and informative book topics like botany soil and climate requirements cultivar development world production and harvesting and postharvest handling are covered in depth for each crop this practical and accessible book is an ideal text for horticulture academics researchers extension workers st

Agricultural and Horticultural Seeds in Malaysia 1969 in indian context

Recent Advances in Horticultural Science in the Tropics 1992 the conservation of crop genetic resources is one of the important elements in efforts to sustainably increase agricultural production in low income countries and to guarantee long term food security especially for the low income population groups in these countries horticultural crops as high value crops have an important role to play in revitalizing rural economies and can add significantly to national economies moreover horticulture provides more than twice the number of jobs compared to traditional cereal crop production and the shifting of conventional agriculture towards high value horticulture has increased employment opportunities in developing countries to exploit this potential researchers need a vast array of horticultural genetic resources and information on new traits horticultural crops which are only a part of pgrfa plant genetic resources for food and agriculture are characterized by a wide and varied range of species in fact there are five major horticultural crop groups fruit and nut crops vegetables food legumes roots and tubers and lastly the ornamental and medicinal group in this context the present book provides a comprehensive overview of the current state of conservation and utilization of horticultural genetic resources addressing contemporary approaches to conservation in connection with different technologies including biotechnological approaches as practised in india and in some cases globally it includes a brief chapter on the unique nature of horticultural genetic resources providing a rationale for viewing them as being distinct from field crop genetic resources subsequent chapters share insights on protocols for the conservation of selected horticultural crops ex situ and focus on the increased need to complement these efforts with in situ conservation approaches geospatial tools are also briefly described emphasizing their utility with regard to mapping and managing resources the book also explores the wild gene pool in horticulture crops discusses legal aspects related to horticultural genetic resources and biotechnological aspects and describes the key aspects of sustainable management and replenishment given its scope the book offers a valuable resource for all horticulturists graduate students researchers policymakers conservationists and ngos engaged in horticulture in particular and biodiversity in general

Living with Plants 1980 the present book is the second volume in the series underutilized and underexploited horticultural crops edited by prof k v peter as in the 1st volume the present volume also covers 6 chapters on underexploited fruits 5 on vegetables 1 on tuber crops 3 each on flowers and trees and 2 on spices dr bhuwon sthapit ipgri malaysia contributes a chapter on in situ conservation of horticultural crops underutilized fruits of andaman and nicobar islands are dealt with in detail by dr d r singh giant granadilla apricot low chilling peaches aonla and ber are dealt by eminent scientists in respective crops dr umesh srivastava icar new delhi deals genetic resource management in cucurbits dr samadia from central institute of arid horticulture bikaner writes on arid vegetables dr s k pandey director cpri shimla elaborates taxonomy of temperate underutilized root and tuber crops underutilized flowers surrounding the homesteads are narrated by dr u sreelatha kerala agricultural university an overview on liliiums is given by dr k valliappan mahua chironji and drumstick are the trees dealt with turmeric and long coriander are elucidated by dr a m rao and dr p indira respectively

Tropical Fruits 2012 with contributions by numerous experts

A Gardening Handbook for Singapore and Malaysia 1979 farmers have developed a range of agricultural practices to sustainably use and maintain a wide diversity of crop species in many parts of the world this book documents good practices innovated by farmers and collects key reviews on good practices from global experts not only from the case study countries but also from brazil china and other parts of asia and latin america a good practice for diversity is defined as a system organization or process that over time and space maintains enhances and creates crop genetic diversity and ensures its availability to and from farmers and other users drawing on experiences from a unep gef project on conservation and sustainable use of wild and

cultivated tropical fruit tree diversity for promoting livelihoods food security and ecosystem services with case studies from india indonesia malaysia and thailand the authors show how methods for identifying good practices are still evolving and challenges in scaling up remain they identify key principles effective as a strategy for mainstreaming good practice into development efforts few books draw principles and lessons learned from good practices this book fills this gap by combining good practices from the research project on tropical fruit trees with chapters from external experts to broaden its scope and relevance

Foreign Agriculture Circular 1982 horticultural reviews presents state of the art reviews on topics in the horticultural sciences the emphasis is on applied topics including the production of fruits vegetables nut crops and ornamental plants of commercial importance the title appears in the form of two volumes per year these articles perform the valuable function of collecting comparing and contrasting the primary journal literature in order to form an overview of the topic this detailed analysis bridges the gap between the specialized researcher and the broader community of horticultural scientists

Management of Horticultural Crops 2008-01-05 this unique encyclopedic treatment of tropical gardening was written specifically for malaysia and singapore but it will be a valuable resource for gardeners in the american tropics as well included are detailed illustrated listings of herbaceous plants shrubs and climbers trees and palms foliage plants orchids vegetables and fruit trees the adventurous gardener will find inspiration and challenges in the distinctive plant materials presented the book assumes the mostly wet tropical climate of malaysia and adjustments will have to be made for local conditions of hawaii and southern california and florida but the authors distinguished botanists with long experience in the tropics provide useful guidance on the requirements for each plant the breathtaking spectrum of tropical plants illustrated will be of extraordinary interest not only to sophisticated gardeners in tropical areas but to greenhouse enthusiasts everywhere book jacket title summary field provided by blackwell north america inc all rights reserved

Conservation and Utilization of Horticultural Genetic Resources 2019-06-25 among the natural resources plant biodiversity is the key to human existence and survival horticultural crops contribute to nutritional and livelihood security mankind depends on near about 5000 plant species worldwide to meet food and other needs this number is just a fraction of total world flora of 2.5 lakh species of mosses ferns conifers and flowering plants more than 50,000 plant species are meeting the food calories needs of human world wide there is still greater dependence on a few plant species 20 to 30 in global context horticultural crops encompass fruit crops vegetables ornamentals plantation crops spices aromatic and medicinal plants tuber crops and mushrooms temperate subtropical and tropical horticultural crops are characterized by their adoption to varying ecology and land use patterns the present volume biodiversity in horticultural crops has 18 chapters contributed by eminent scientists working in the respective crops biodiversity is conceived as gift of nature for sustainability nutritional security and above all to widen the food basket man lives not for food alone but to enjoy nature's gift fruits vegetables flowering plants foliage and so on genes for desirable traits are embedded in biodiversity and as such the present the volume thrown open horticultural bioresources to human benefit the present volume emphasis current and widely grown horticultural crops in india in all its biodiversity the volume is edited by dr k v peter former vice chancellor and current professor of horticulture kerala agricultural university as vegetable breeder at g b pant university of agriculture and technology pantnagar he surveyed collected documented and conserved working germplasm of tomato brinjal and chili during 1991-1998 as director indian institute of spices research calicut he facilitated establishment of worlds largest collection of black pepper germ plasm working collections of cardamom ginger turmeric nutmeg clove allspice and vanill were also felicitated to be organized he also co authored descriptors of black pepper and cardamom published by ipgri rome contents chapter 1 conservation and use of tropical fruit species diversity in asia ipgri s contributions by bhag mal v ramanatha rao r k arora and percy e sajise chapter 2 temperate fruit crops by a sofi m k verma r k verma and h choudhary chapter 3 tropical fruits by g s prakash and m r dinesh chapter 4 the genus musa banana and plantains by s uma and s sathiamoorthy chapter 5 temperate and subtropical vegetables by d ram mathura rai and major singh chapter 6 tropical vegetable crops by k r m swamy and a t sadashiva chapter 7 tropical tuber crops by m s palaniswami and shirly raichal anil chapter 8 orchids of western ghats india by c sathish kumar and s ganeshan chapter 9 conservation of spices genetic resources through

Underutilized and Underexploited Horticultural Crops 2007 jackfruit artocarpus heterophyllus is a species of tree in the fig mulberry and breadfruit family moraceae and is widely esteemed in tropical asia the jackfruit tree is well suited to tropical lowlands and is widely cultivated throughout south and south east asia it is also grown to a limited extent in australia usa east africa as well as in brazil mexico and the caribbean producing giant fruits which can reach up to 80kg in size jackfruit is the largest tree borne fruit in the world it is highly versatile providing food timber fuel in addition to medicinal and industrial products the ripe fruit is sweet and is more often used for desserts canned green jackfruit has a mild taste and meat like texture that lends itself to being called a vegetable meat hence it is growing in popularity due to its use as a vegan meat alternative containing information on jackfruit production technology postharvest management and processing this is a valuable resource for researchers in horticulture plant science and those interested in sustainable food systems

Ecological Landuse Planning and Sustainable Management of Urban and Sub-urban Green Areas in Kota Kinabalu, Malaysia 2006-12-08 nematodes continue to threaten horticultural crops throughout the world particularly in tropical and sub tropical regions estimated overall average annual yield loss of the world s major horticultural crops due to damage by plant parasitic nematodes is 13 54 monetary losses due to nematodes on 10 horticultural crops six of which are life sustaining were estimated at us 19 37 billion annually based on 1984 production figures and prices these deleterious effects on plant growth result in reduced yields and poor quality of horticultural crops nematode management is therefore important for high yields and quality that are required by the high cost of modern crop production the information on nematode diseases and their management especially crop wise is very much scattered and there is no book which deals entirely with the above aspects on horticultural crops this book deals with nematode diseases and their management in horticultural crops such as fruit vegetable orname nta medicinal aromatic plantation spice and tuber crops each nematode disease is described in adequate detail under the following heads economic importance crop losses distribution symptoms hosts range life cycle races biotypes host parasite relationship histopathology ecology spread survival interaction with other pathogens and management the management methods presented includes regulatory physical cultural chemical biological host resistance and integrated approach an entire chapter is devoted for sources of availability of critical inputs used for nematode management which would be very useful to the farmers very useful information on certain aspects of nematode management is presented in appendix the book is adequately illustrated with about 50 figures this book is a practical guide to practicing farmers of horticultural crops further it is a useful reference to policy makers research and extension workers and students the material can also be used for teaching under graduate and post graduate courses

The Gardens' Bulletin 2001 this report is published to pass on information concerning horticultural research and development undertaken for the pineapple industry cover verso Study Tour to Thailand, Malaysia and Singapore for Summer Fruit and Citrus Growers, Packers and Exporters, August 08 2008 farmers have developed a range of agricultural practices to sustainably use and maintain a wide diversity of crop species in many parts of the world this book documents good practices innovated by farmers and collects key reviews on good practices from global experts not only from the case study countries but also from brazil china and other parts of asia and latin america a good practice for diversity is defined as a system organization or process that over time and space maintains enhances and creates crop genetic diversity and ensures its availability to and from farmers and other users drawing on experiences from a unep gef project on conservation and sustainable use of wild and cultivated tropical fruit tree diversity for promoting livelihoods food security and ecosystem services with
