it is a commonplace in educational policy and theory to claim that digital technology has transformed the university the nature of learning and even the essence of what it means to be a scholar or a student however these claims have not always been based on strong research evidence what are students and scholars actually doing in the day to day life of the digital university this book examines in detail how the world of the digital interacts with texts artefacts devices and humans in the contemporary university setting weaving together perspectives from a range of thinkers and disciplinary sources lesley gourlay draws on ideas from posthuman and new materialist theory in particular to open up our understanding about how digital knowledge

practices operate she proposes that digital engagement in the university should not be regarded as virtual or disembodied but instead may be understood as a complex set of entanglements of the body texts and material artefacts making a case that agency and the ways in which knowledge emerges should be regarded as more than human
