method of operation was almost invariably to amputate a cervix badly infected or one showing multiple lacerations and to use trachelorrhaphy in those cases presenting one or two more or less discrete lacerations and without a marked endocervicitis sturmdorf after giving a summary of leonard s conclusions says accepting these data from authoritative sources as a correct exposition of facts the obvious deduction is that with chronic endocervicitis as the recognized pathologic indicator trachelorrhaphy is an inadequate and cervix amputation an injurious operation about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works blank obstetrician and gynecologist log get your copy today large size 8 5 inches by 11 inches enough space for writing include sections for date time patient s name identification number age type of ward and ward number complaints ultrasound findings diagnosis procedures complications surgeon s name and signature supervisor s name and signature notes buy one today and have a record of your patients excerpt from the american journal of obstetrics and gynecology vol 4 july 1922 december 1922 examination of some thirty of our cases from six weeks to twelve months postpartum reveals the satisfactory fact that there are few exceptions showing either by history or physical signs appreciable decline in circulatory efficiency as a result of the pregnancy exceptions have been those becoming obese those suffering further inroads of rheumatic infection and one example of syphilitic aortitis that has continued on the expected downward course about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works blank obstetrician and gynecologist log get your copy today large size 8 5 inches by 11 inches enough space for writing include sections for date time patient s name identification number age type of ward and ward number complaints ultrasound findings diagnosis procedures
