reproducibility in biomedical research epistemological and statistical problems 2nd ed explores the ideas and conundrums inherent in scientific research reproducibility is one of the biggest challenges in biomedical research it affects not only the ability to replicate results but the very trust in the findings since published in 2019 reproducibility of biomedical research epistemological and statistical problems established itself as a solid ethical reference in the area leading to significant reflection on biomedical research the second edition addresses new challenges to reproducibility in biosciences namely reproducibility of machine learning artificial intelligence ai reproducibility of translation from research to medical care and the fundamental challenges to reproducibility all current chapters will be expanded

to cover advances in the topics previously addressed reproducibility in biomedical research epistemological and statistical problems 2nd ed provides biomedical researchers with a framework to better understand the reproducibility challenges in the area newly introduced interactive exercises and updated case studies help students understand the fundamental concepts involved in the area includes four new chapters and updates across the book covering recent developments of issues affecting reproducibility in biomedical research covers reproducibility of results from machine learning ai algorithms presents new case studies to illustrate challenges in related fields includes a companion website with interactive exercises and summary tables

modeling and optimization of optical communication networks optical networks are an integral part of many of the technologies that we use every day it is a constantly changing and evolving area with new materials processes and applications coming online almost daily this book provides a basis for discussing open principles methods and research problems in the modeling of optical communication networks it also provides a systematic overview of the state of the art research efforts and potential research directions dealing with optical communication networks it also simultaneously focuses on extending the limits of currently used systems encompassing optical and wireless domains and explores novel research on wireless and optical techniques and systems describing practical implementation activities results and issues a handbook on applications for both academia and industry this exciting new volume includes detailed discussions on real world case studies on trends and emerging technologies associated with modeling of optical communication networks this book also describes several numerical models and algorithms for simulation and optimization of optical communication networks modeling and optimization presents several opportunities for automating operations and introducing intelligent decision making in network planning and in dynamic control and management of network resources including issues like connection establishment

self configuration and self optimization through prediction and estimation by utilizing present network state and historical data it focuses on extending the limits of currently used systems encompassing optical and wireless domains and explores the latest developments in applications like photonics high speed communication systems and networks visible light communication nano photonics wireless and mimo systems
