since the discovery of high temperature superconductors many new materials have been invented in the last year several new materials were also discovered but their critical temperatures are still below look precise physical and chemical work has made tremendous progress in the theoretical and experimental study of physical properties and carrier state characterizations the de haas van alphen effect measurement showed the existence of a fermi surface in ybco flux dynamics is a well known new problem in which flux creep and irreversibility line features are especially important for a fundamental understanding of the critical current and flux pinning flux pinning centers which are

intentionally added using non superconducting precipitates neutrons and protons etc increase critical currents to practical levels the analysis of electric and magnetic properties are expected to reveal the pinning mechanism and also to further application development as for wires and bulks many melt like sintering techniques have improved the material performance of critical current densities a new seeding quench melt growth technique enlarged crystal size and increased the repulsion force these melting processes in conjunction with a mechanical strength improvement have been effectively introduced into wire fabrication in order to realize kilometer range wires and will put the oxide wires to practical use where thin film is concerned when many fabrication methods had been developed using the assistance effect of activated oxygen such as ozone and oxygen radicals a high current density of  $106 \text{ A cm}^{-2}$  at  $77 \text{ K}$  was reported

the use of electric power substations in generation transmission and distribution remains one of the most challenging and exciting areas of electric power engineering recent technological developments have had a tremendous impact on all aspects of substation design and operation with 80 of its chapters completely revised and two brand new chapters on energy storage and smart grids electric power substations engineering third edition provides an extensive updated overview of substations serving as a reference and guide for both industry and academia contributors have written each chapter with detailed design information for electric power engineering professionals and other engineering professionals e g mechanical civil who want an overview or specific information on this

challenging and important area this book emphasizes the practical application of the technology includes extensive use of graphics and photographs to visually convey the book's concepts provides applicable IEEE industry standards in each chapter is written by industry experts who have an average of 25 to 30 years of industry experience presents a new chapter addressing the key role of the substation in smart grids editor John McDonald and this very impressive group of contributors cover all aspects of substations from the initial concept through design automation and operation the book's chapters which delve into physical and cyber security commissioning and energy storage are written as tutorials and provide references for further reading and study as with the other volumes in the electric power engineering handbook series this book supplies a high level of detail and more importantly a tutorial style of writing and use of photographs and graphics to help the reader understand the material several chapter authors are members of the IEEE Power Energy Society PES Substations Committee and are the actual experts who are developing the standards that govern all aspects of substations as a result this book contains the most recent technological developments in

this is the proceedings of the fourth in a series of inter national gatherings on kindling held on the university of british columbia campus june 15 17 1989 since the last gath ering in 1985 kindling continues to attract an ever increasing number of investigators as reflected by the phenomenal

increase in the number of kindling related research reports no other acute or chronic model has been exploited so extensively using electrophysiological pharmacological biochemical and behavioral approaches involving a variety of brain sites and animal species the continuing search during the past few years for the mechanism underlying the enduring change induced by kindling is beginning to shed some light on aspects of its molecular basis and to suggest the future direction of research the late graham goddard the original kindler would have been delighted with this development we were all shocked and saddened by his tragic death but his spirit is very much alive among all of us who gathered together to share new information and collectively reassess the present state of knowledge at this symposium i must say that we miss him very very much we know he is happy in his heaven knowing that he accomplished more in a short lifetime than most and that his love for mankind and life's challenges remain as a legacy and goal for us all

fossil fuels led the 21st century industrial revolution but caused some critical problems such as  
exhaustion of resources and global warming also current power plants require too much high cost and  
long time for establishment and facilities to provide electricity thus developing new power production  
systems with environmental friendliness and low cost is critical global needs there are some emerging  
energy harvesting technologies such as thermoelectric piezoelectric and triboelectric nanogenerators  
which have great advantages on eco friendly low cost materials simple fabrication and various

operating sources since the introduction of various energy harvesting technologies many novel designs and applications as power suppliers and physical sensors in the world have been demonstrated based on their unique advantages in this special issue we would like to address and share basic approaches new designs and industrial applications related to thermoelectric piezoelectric and triboelectric devices which are on going in korea with this special issue we aim to promote fundamental understanding and to find novel ways to achieve industrial product manufacturing for energy harvesters

scientific protocols for fire investigation third edition focuses on the practical application of fundamental scientific principles to determine the causes of fires originally published in 2006 the first edition was very well received by fire investigators and those who work with them since fire investigation is a rapidly evolving field driven by new discoveries about fire behavior the second edition was published in

late 2012 this latest fully updated third edition reflects the most recent developments in the field currently serious research is underway to try to understand the role of ventilation in structure fires likewise there is improved understanding of the kinds of errors investigators can make that lead to incorrect determinations of the causes of fires in addition to the scientific aspects the litigation of fire related events is rapidly changing particularly with respect to an investigator's qualifications to serve as an expert witness this book covers these latest developments and ties together the changing standards for fire investigations with the fundamental scientific knowledge presented in the early chapters of the book the book is intended for those individuals who have recently entered the field of fire investigation and those who are studying fire investigation with a plan to become certified professionals in addition professionals in the insurance industry who hire fire investigators will find this an invaluable resource insurance companies have sustained significant losses by hiring individuals who are not qualified resulting in cases being settled or lost at a cost of millions insurance adjusters and investigators will learn to recognize quality fire investigations and those that are not up to today's

standards lastly this book is also for the many attorneys who litigate fire cases written with language and terms that make the science accessible even to the non scientist this new edition will be a welcome resource to any professional involved in fire and arson cases
