polycrystalline silicon commonly called polysilicon is the material of choice for photovoltaic pv applications polysilicon is the purest synthetic material on the market though its processing through gas purification and decomposition commonly called siemens process carries high environmental risk while many current optoelectronic applications require high purity pv applications do not and therefore alternate processes and materials are being explored for pv grade silicon solar silicon processes technologies challenges and opportunities reviews current and potential future processing technologies for pv applications of solar silicon it describes alternative processes and issues of material purity cost and environmental impact it

covers limits of silicon use with respect to high efficiency solar cells and challenges arising from r d activities the book also defines purity requirements and purification processes of metallurgical grade silicon mg si and examines production of solar grade silicon by novel processes directly from mg si and or by decomposition of silane gas in a fluidized bed reactor fbr furthermore the book analyzes past research and industrial development of low cost silicon processes in view of understanding future trends in this field discusses challenges and probability of success of various solar silicon processes covers processes that are more environmentally sensitive describes limits of silicon use with respect to high efficiency solar cells and challenges arising from r d activities defines purity requirements and purification processes of mg si examines production of solar grade silicon directly from mg si
