no weapon platform sank more u boats in the second world war than the allied aircraft whether it was an american plane operating from american escort carriers us aircraft from royal air force bases or british aircraft from bases throughout the world these officers and men became the most decisive factor in turning the tide of the battle of the atlantic against the german submarine threat while the german crews could threaten escort vessels with torpedoes or avoid them by remaining submerged their leaders never developed an effective strategy against aircraft however the allied aircraft did not enjoy much early success british canadian and australian air crews that fought the u boats from 1939 until 1941 achieved few triumphs they possessed neither the aircraft nor the bases necessary to deliver consistent lethal attacks against german submarines in 1941 the royal air force finally began implementing an effective aircraft response when it initiated training on the american built consolidated b 24 liberators supported by other types then in service these four engine bombers would prove to be decisive with america s entry into the war the united states navy and the united states army air forces also began employing liberators against the u boats so that by mid 1943 the admiral karl dōnitz commander of u boat forces withdrew his submarines from the north atlantic in recognition of the allied aircraft s new dominance from dōnitz s retreat to the end of the war allied aircraft continued to dominate the u boat battle as it shifted to other areas including the bay of biscay dōnitz eventually ordered his u boats to remain on the surface and engage allied aircraft as opposed to submerging this approach did lead to the demise of some allied aircraft but it also resulted in even more u boat being sunk most critically dōnitz acknowledged with his new policy that he knew of no tactics or weapons that would defend his submarines from allied aircraft in the end it was a matter of choosing whether his submariners would die submerged or die surfaced either way allied aircraft prevailed the allied air campaign against hitler s u boats is the most comprehensive study ever undertaken of this most crucial battle which helped turn the battle of the atlantic irrevocably in favour of the allies

this book explores what constitutes valid or powerful educational knowledge and the role of educational theorising in questions of educational practice it examines the challenges facing the deliberative educational knowledge traditions of educational foundations curriculum theory and didaktik as a consequence of the rising tide of empiricism in educational research the what works agenda in global educational reform and internal fragmentation within the traditions themselves by examining the potential for the reconfiguration or reconstruction of these traditions the book explores the possibility of reinvigorating deliberative educational theorising in ways that could provide a meaningful basis for educators to conceptualise their practice and a robust response to policies that seek to narrow educational activity to a focus solely on learning outcomes and technical efficiency this insightful volume will be of interest to all those concerned about the future of education and particular the relationship between educational theory and educational practice in curriculum studies teacher education and professional development it will be a key resource for teachers curriculum developers policy makers and researchers in the field of curriculum theory and didactics the book was originally published as a special issue of journal of curriculum studies

Aquatic and Wetland Plants of Northeastern North America, Volume II

1993

this volume is the second of the new two volume plant biotechnology set this volume covers many recent advances in the development of transgenic plants that have revolutionized our concepts of sustainable food production cost effective alternative energy strategies microbial biofertilizers and biopesticides and disease diagnostics through plant biotechnology with the advancements in plant biotechnology many of the customary approaches are out of date and an understanding of new updated approaches is needed this volume presents information related to recent methods of genetic transformation gene silencing development of transgenic crops biosafety issues microbial biotechnology oxidative stress and plant disease diagnostics and management key features provides an in depth knowledge of various techniques of genetic transformation of plants chloroplast and fungus describes advances in gene silencing in plants discusses transgenic plants for various traits and their application in crop improvement looks at genetically modified foods and biodiesel production describes biotechnological approaches in horticultural and ornamental plants explores the biosafety aspect associated with transgenic crops considers the role of microbes in sustainable agriculture

financial sustainability is one of the key challenges confronting europe s universities today despite the fact that universities are at the centre of knowledge creation and development which itself is seen as one of the main engines of economic growth public funding of higher education in most countries is not increasing or at least not increasing enough in real terms democratisation of higher education has led to the fact that the higher education budgets per student are relatively low in most european countries compared to europe s competitors despite declarations of intent to increase spending on higher education and research it is not very likely that public expenditure will grow

significantly on average in Europe and therefore be able to keep up with rapidly inflating costs in the years to come one of the reasons for this is that higher education and research have to compete with other priorities in public budgets e.g. security, health, etc. Furthermore, the recent economic downturn has contributed to the decision in many European countries to decrease the levels of investment in higher education and research. Such trends are particularly worrisome for universities across Europe whose continuing dependence on public funding puts their future sustainability under pressure. New funding schemes and incentives have been discussed and introduced in many European higher education systems, including competitive funding schemes for research under the name of excellence policies. Despite the different national institutional configurations in Europe, higher education systems face similar demands of promoting sustainable funding models, maintaining high academic standards, and equality. Thus, financial sustainability is not an end in itself; it aims to ensure that the public university's goals are reached by guaranteeing that the institution produces sufficient income to enable it to invest in high-quality education and produce equitable outcomes. For these reasons, this book analyses funding reforms from a multidimensional approach.

Objective Physics for NEET Vol 1 2022

1910

This book collects many of the presented papers as plenary presentations, mini symposia, invited presentations, or contributed talks from the European Conference on Numerical Mathematics and Advanced Applications (ENUMATH 2017). The conference was organized by the University of Bergen, Norway, from September 25 to 29, 2017. Leading experts in the field presented the latest results and ideas in the designing, implementation, and analysis of numerical algorithms, as well as their applications to relevant societal problems. ENUMATH is a series of conferences held every two years to provide a forum for discussing basic aspects and new trends in numerical mathematics and scientific and industrial applications. These discussions are upheld at the highest level of international expertise. The first ENUMATH conference was held in Paris in 1995, with successive conferences being held at various locations across Europe, including Heidelberg (1997), Jyväskylä (1999), Ischia Porto (2001), Prague (2003), Santiago de Compostela (2005), Graz (2007), Uppsala (2009), Leicester (2011), Lausanne (2013), and Ankara (2015).

Algebras, Rings and Modules, Volume 2

1965

The Crimean Peninsula was the setting for the destruction of a number of armies in World War II, both Soviet and German. When the Soviets fortified Sevastopol in 1941, it heralded the beginning of a period of intense fighting over the Crimea. In this remarkable work, acclaimed author Robert Forczyk assembles new research to investigate the intense and barbaric fighting for the region in World War II, where first Soviet and then German armies were surrounded and totally obliterated. Forczyk's unique account provides a definitive analysis of the many unique characteristics of the conflict, exploring the historical context as it uncovers one of the most pivotal theaters of the Eastern Front during World War II.

functional analysis is an important branch of mathematical analysis which deals with the transformations of functions and their algebraic and topological properties motivated by their large applicability to real life problems applications of functional analysis have been the aim of an intensive study effort in the last decades yielding significant progress in the theory of functions and functional spaces differential and difference equations and boundary value problems differential and integral operators and spectral theory and mathematical methods in physical and engineering sciences the present volume is devoted to these investigations the publication of this collection of papers is based on the materials of the mini symposium functional analysis in interdisciplinary applications organized in the framework of the fourth international conference on analysis and applied mathematics icaam 2018 september 6 9 2018 presenting a wide range of topics and results this book will appeal to anyone working in the subject area including researchers and students interested to learn more about different aspects and applications of functional analysis many articles are written by experts from around the world strengthening international integration in the fields covered the contributions to the volume all peer reviewed contain numerous new results this volume contains four different chapters the first chapter contains the contributed papers focusing on various aspects of the theory of

functions and functional spaces the second chapter is devoted to the research on difference and differential equations and boundary value problems the third chapter contains the results of studies on differential and integral operators and on the spectral theory the fourth chapter is focused on the simulation of problems arising in real world applications of applied sciences

US Destroyers vs German U-Boats

2014

triangulations and more precisely meshes are at the heart of many problems relating to a wide variety of scientific disciplines and in particular numerical simulations of all kinds of physical phenomena in numerical simulations the functional spaces of approximation used to search for solutions are defined from meshes and in this sense these meshes play a fundamental role this strong link between the meshes and functional spaces leads us to consider advanced simulation methods in which the meshes are adapted to the behaviors of the underlying physical phenomena this book presents the basic elements of this meshing vision

European Control Conference 1993

2019-01-05

the second and final volume of the definitive account of the german submarine war acclaimed on its publication in 1997 should become the standard history of the unterseeboote washington post volume one of clay blair s magnum opus is here followed by volume two the hunted covering 1942 45 in this volume the fortunes of the german navy are completely reversed due in no small part to allied codebreaking and they suffer perhaps the most devastating defeat of any of the germany forces destroying their submarine service entirely blair has been at work on this history for nine years since the british and american governments began to release official wwii records in the 1980s blair himself served in submarines in combat in wwii he chronicles the u boat war with authority fidelity objectivity and extraordinary detail he also writes vivid and dramatic scenes of naval actions and dispassionate but startling new revelations interpretations and conclusions about all aspects of the battle of the atlantic

University Adaptation in Difficult Economic Times

2014-09-20

now in its seventh printing the memoir of a woman whose strength courage and intelligence had a profound impact on vietnamese history not simply a participant in the viet minh resistance against the french mrs nguyen thi dinh was also an active leader who organized the uprising in ben tre province against the diem regime was appointed to the leadership committee of the national liberation front nlf and served as chairman of the south vietnam women s liberation association the oppressive policies of diem and the problems of civil war and american involvement are described with powerful immediacy effectively illustrating the patriotic fervor and determination of those she fought with and helped lead

Numerical Mathematics and Advanced Applications ENUMATH 2017

2012-12-06

through the previous three editions handbook of differential equations has proven an invaluable reference for anyone working within the field of mathematics including academics students scientists and professional engineers the book is a compilation of methods for solving and approximating differential equations these include the most widely applicable methods for solving and approximating differential equations as well as numerous methods topics include methods for ordinary differential equations partial differential equations stochastic differential equations and systems of such equations included for nearly every method are the types of equations to which the method is applicable the idea behind the method the procedure for carrying out the method at least one simple example of the method any cautions that should be exercised notes for more advanced users the fourth edition includes corrections many supplied by readers as well as many new methods and techniques these new and corrected entries make necessary improvements in this edition

Where the Iron Crosses Grow

1993

in this second book of the three volume series advances in presencing professors olen gunnlaugson and william brendel bring together the latest offerings from an array of practitioners globally who are committed to stewarding a more promising future through applications of presencing in their organizations communities and research with a growing international exposure and interest in theory u in recent years this groundbreaking book series documents the latest research and innovations currently pushing the edges of this emerging field
