Pictures of a father and child out in the moonlight illustrate Stevenson's poem from a child's garden of verses. In graphic novel format, text and illustrations describe the eight phases of the moon. The moon is at once a face with a thousand expressions and the archetypal planet throughout history. It has been gazed upon by people of every culture in every walk of life. From early perceptions of the moon as an abode of divine forces, humanity has in turn accepted the mathematized moon of the Greeks, the naturalistic lunar portrait of Jan van Eyck, and the telescopic view of Galileo. Scott Montgomery has produced a richly detailed analysis of how the moon has been visualized in Western culture through the ages, revealing the faces it has presented to philosophers, writers, artists, and scientists for nearly three millennia. To do this, he has drawn on a wide array of sources that illustrate mankind's changing concept of the nature and significance of heavenly bodies from classical antiquity to the dawn of modern science. Montgomery especially focuses on the seventeenth century when the moon was first mapped and its features named from literary explorations such as Francis Godwin's *Man in the Moone* and Cyrano de Bergerac's *L'autre monde* to Michael van
