**HANDBOOK OF NONPRESCRIPTION DRUGS** 2021 in the u s most nonprescription drugs are available over the counter in pharmacies and other stores experts have suggested that drug availability could be increased by establishing an additional class of nonprescription drugs that would be held behind the counter btc but would require the intervention of a pharmacist before being dispensed a similar class of drugs exists in many other countries this is a report on 1 arguments supporting and opposing a u s btc drug class 2 changes in drug availability in 5 countries and the impact of restricted nonprescription classes on availability and 3 issues important to the establishment of a btc drug class the author studied 5 countries australia italy the netherlands the u k and the u s

**Handbook of Nonprescription Drugs Quick Reference** 2006 in the united states most non prescription drugs are available over the counter otc in pharmacies and other stores experts have suggested that drug availability could be increased by establishing an additional class of non prescription drugs that would be held behind the counter btc but would require the intervention of a pharmacist before being dispensed a similar class of drugs exists in many other countries although the food and drug administration fda has not developed a detailed proposal for a btc drug class it

held a public meeting to explore the public health implications of btc drug availability this book explores the public health benefits of behind the counter availability of certain drugs without a prescription in particular the debate whether behind the counter may improve patient access to safe and effective drug products is discussed this book looks at the pharmacist infrastructure and cost related issues which would have to be addressed before a btc drug class could be established in the united states

**Handbook of Nonprescription Drugs** 1995 the handbook of nonprescription drugs quick reference provides a succinct summary of the most common self care conditions for which community pharmacists provide treatment recommendations it presents the most essential information that is needed in the otc aisle to assess if patients are candidates for self care appropriate treatment recommendations are also indicated based on the patient s presentation current medications and chronic conditions the chapters are presented in the quest scholar mac format providing a standardized process to help student pharmacists and practitioners quickl

**Handbook of Nonprescription Drugs** 2009-11 contains information from the american pharmacists association s comprehensive handbook of nonprescription drugs an interactive approach to self care 17th edition this book addresses common self treatable conditions it includes self care algorithms that provide treatment and follow up recommendations along with exclusions for self treatment

Handbook of Nonprescription Drugs Quick Reference 2012 in the united states most nonprescription drugs are available over the counter otc in pharmacies and other stores experts have suggested that drug availability could be increased by establishing an additional class of nonprescription drugs that would be held behind the counter btc but would require the intervention of a pharmacist before being dispensed a similar class of drugs exists in many other countries although the food and drug administration fda has not developed a detailed proposal for a btc drug class it held a public meeting in 2007 to explore the public health implications of btc drug availability gao was asked to update its 1995 report nonprescription drugs value of a pharmacist controlled class has yet to be demonstrated gao pemd 95 12 specifically gao is reporting on 1 arguments supporting and opposing a u s btc drug class 2 changes in drug availability in five countries since 1995 and the impact of restricted nonprescription classes on availability and 3 issues important to the establishment of a btc drug class gao reviewed documents and consulted with pharmaceutical experts to examine drug availability across countries gao studied five countries it had reported on in 1995 australia italy the netherlands the united kingdom and the united states and determined how 86 drugs available in all five countries were classified in each country arguments supporting and opposing a btc drug class in the united states have been based on public health and health care cost considerations and reflect general disagreement on the likely consequences of establishing such a class proponents of a btc drug class suggest it would lead to improved public health through increased availability of nonprescription drugs and greater use of pharmacists expertise opponents are concerned that a btc drug class might become the default for drugs switching from

prescription to nonprescription status thus reducing consumers access to drugs that would otherwise have become available otc and argue that pharmacists might not be able to provide high quality btc services proponents of a btc drug class point to potentially reduced costs through a decrease in the number of physician visits and a decline in drug prices that might result from switches of drugs from prescription to nonprescription status however opponents argue that out of pocket costs for many consumers could rise if third party payers elect not to cover btc drugs all five countries gao studied have increased nonprescription drug availability since 1995 by altering nonprescription classes or reclassifying some drugs into less restrictive classes italy and the netherlands which previously allowed nonprescription drugs to be sold only at specialized drug outlets made some or all of these drugs available for otc sale australia the united kingdom and the united states switched certain drugs from more restrictive to less restrictive drug classes increasing these drugs availability however the impact of restricted nonprescription drug classes on availability is unclear when we examined the classification of 86 selected drugs in the five countries we found that the united states required a prescription for more of those drugs than did australia or the united kingdom the study countries using a btc drug class however the united states classified more of the 86 drugs as otc the option that provides greatest access to these drugs for consumers than all four of the other study countries pharmacist infrastructure and cost related issues would have to be addressed before a btc drug class could be established in the united states for example ensuring that pharmacists provide btc counseling and that pharmacies have the infrastructure to protect consumer privacy would be important issues related to the cost of btc drugs would also require consideration for example the availability of third party coverage for btc drugs would affect consumers out of pocket expenditures and pharmacists compensation for providing btc services would need to be examined in commenting on a draft of this report the department of health and human services hhs agreed that cost related issues would have to be addressed before implementing a btc drug class and also provided technical comments the department of veterans affairs va also reviewed the report and provided technical comments we have incorporated hhs and va technical comments as appropriate

*The Practitioner's Quick Reference to Nonprescription Drugs* 2009 essentials of nonprescription medications and devices provides a quick comprehensive reference of products available for self care each chapter covers a common medical condition
