Aprender a generar ideas 2007 between the two world wars stanislaw lesniewski 1886 1939 created the famous and important system of foundations of mathematics that comprises three deductive theories protothetic ontology and mereology his research started in 1914 with studies on the general theory of sets later named mereology ontology followed between 1919 and 1921 and was the next step towards an integrated system in order to combine these two systematically he constructed protothetic the system of first principles together they amount to what z jordan called most thorough original and philosophically significant attempt to provide a logically secure foundation for the whole of mathematics the volume collects many of the most significant commentaries on and contributions to protothetic a protothetic bibliography is included

"The" Works of John Locke in Four Volumes 1777 one can often encounter an opinion that polish scientific or analytic philosophy or the lvov warsaw school deserves to be much better known than actually is this book is thought as a response to such a claim the papers collected in this volume are divided into two parts background and influence and history and systematics however there is no sharp borderline between themes which are touched in both parts generally speaking all papers of the first part relate the lvov warsaw school to some philosophical movements brentanism phenomenology and marxism external to it whereas the papers collected in the second one focus on internal issues connected with the school only roberto poli takes into account brentano s views in his discussion of reism since the polish school of mathematical logic is much better known than the polish analytic philosophy we decided to omit here any treatment of the former thus this collection centers on purely philosophical matters we projected this volume not as an exhaustive panorama of polish analytic philosophy but rather as a series of essays on particular persons or topic as a result one can find here papers on twardowski ajdukiewicz kotarbinski tarski and lukasiewicz as well as on ethics on science nominalism and the methodology of psychology we hope that this book will contribute to a better knowledge and evaluation of polish achievements in analytic philosophy we would like to express our gratitude to professor leszek nowak the editor in chief of poznan studies in the philosophy of the sciences and the humanities who initiated the idea of the collection and helped in its preparation
