Emerging Solutions for Future Manufacturing Systems

2006-01-04

industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio economic environment in order to respond to these challenges companies are forced to seek new technological and organizational solutions in this context two main characteristics emerge as key properties of a modern automation system agility and distribution agility because systems need not only to be flexible in order to adjust to a number of a priori defined scenarios but rather must cope with unpredictability distribution in the sense that automation and business processes are becoming distributed and supported by collaborative networks emerging solutions for future manufacturing systems includes the papers selected for the basys 04 conference which was held in vienna austria in september 2004 and sponsored by the international federation for information processing ifip

this report describes the development of an implicit viscous method for the solution of the quasi three dimensional flow equations for rotor stator interaction in transonic turbomachinery the flow algorithm is described followed by the implicit time marching scheme and the one equation turbulence model the algorithm is implemented on an unstructured grid arrangement of locally structured micro blocks called patches solution dependent adaptation is used to refine the grid in regions containing flow features which require enhanced resolution an overlapped sliding grid interface is used to transfer flow equation information between the respective blade grids the resulting computational algorithm has been used to perform a number of validation exercises and has been demonstrated on a modern transonic turbine stage where possible these results are compared with experimental data and show the ability of the method to accurately capture the unsteady flow physics in a robust and computationally efficient manner
