this treatise is an outgrowth of a series of seminars and tutorials on selected legal aspects of geology that were offered to several

generations of undergraduate students at Lawrence University the offerings were in response to a keen interest in how the law and legal institutions relate to the professional geologist much of the student interest was undoubtedly sparked by the legal controversies associated with the environmental movement that became so active during the 1970s and continues today to look to the law for the resolution of conflicting goals other students were interested in the role allocated to law by society in general or were simply curious about law as a profession existing published material did not meet my needs and I had to rely on handouts summarizing legal principles reported appellate cases and guest lectures from the county bar association the more formally prepared course materials were edited by practicing attorneys and scholars in academia who encouraged me to seek a publisher who might make the materials available to a broader audience an audience that might include not only students of the law but also the professional geologist geological engineers planners policy makers and attorneys whether in industry government education or private practice who want to know more about the relationship between law and geology

pediatric primary care provides a unique opportunity to tackle child abuse and neglect in the United States in particular primary care is a well established system and most children have multiple visits especially in the first few years there is typically a very good relationship between parents and health professionals who are respected experts on children the interested pediatrician thus has a remarkable entrée into the workings of a family its shortcomings and its strengths with some knowledge and skill pediatricians can play a pivotal role even in a few strategic minutes we know however that some professionals feel very uncomfortable becoming involved in this unpleasant area and may be deterred from taking any action understandable as this may be it can jeopardize a child's health and safety hopefully this issue of pediatric clinics of North America will help make this work a bit easier albeit not easy with training and support pediatricians can equip themselves to be competent and more comfortable addressing child maltreatment aside from the possible forensic implications the heart of this work is primarily about helping families take adequate or good care of their children indeed helping address child abuse and neglect also helps promote children's health development and safety and it is central to the rich mandate of pediatrics
