# The Three-Ray Megacontinent of the Earth

2019-10

the journey to the centre of the earth is a voyage like no other we can imagine over 3 000 km below the earth s surface an extraordinary inner world the size of mars awaits us dive through the molten iron of the outer core and eventually you will reach a solid sphere an iron clad world held within a metal sea and unattached to anything above at the earth s core is the history of our planet written in temperature and pressure crystals and minerals our planet appears tranquil from outer space and yet the arcs of volcanoes the earthquake zones and the auroral glow rippling above our heads are testimony to something remarkable happening inside for thousands of years these phenomena were explained in legend and myth only in recent times has the brave new science of seismology emerged one hundred and fifty years after the extraordinary imaginative feat of jules verne s journey to the centre of the earth david whitehouse embarks on a voyage of scientific discovery into the heart of our world

### Journey to the Centre of the Earth

2015-04-09

the new seven volume discovering the earth set examines the efforts made by scientists in the fields of environment environmental protection and environmental science covering a broad range of topicsincluding the earth sciences atmosphere oceans ecology animals plants and exploration books in this comprehensive set provide a panorama of brief accounts of particular discoveries and the people who made them these stories explain the problems that were solved the ways they were approached and in some cases the dead ends that scientists sometimes reached

## Discovering the Earth Set

2010-03-30

there are three men whose contributions helped free science from the straitjacket of theology two of the three nicolaus copernicus and charles darwin are widely known and heralded for their breakthroughs the third james hutton never received the same recognition yet he profoundly changed our understanding of the earth and its dynamic forces hutton proved that the earth was likely millions of years old rather than the biblically determined six thousand and that it was continuously being shaped and re shaped by myriad everyday forces rather than one cataclysmic event in this expertly crafted narrative jack repcheck tells the remarkable story of this scottish gentleman farmer and how his simple observations on his small tract of land led him to a theory that was in direct confrontation with the bible and that also provided the scientific proof that would spark darwin s theory of evolution it is also the story of scotland and the scottish enlightenment which brought together some of the greatest thinkers of the age from david hume and adam smith to james watt and erasmus darwin finally it is a story about the power of the written word repcheck argues that hutton s work was lost to history because he could not describe his findings in graceful and readable prose unlike darwin s origin of the species hutton s one and only book was impenetrable a marvelous narrative about a little known man and the science he founded the man who found time is also a parable about the power of books to shape the history of ideas

# The earth we live on : The story of geological discovery

1966

this book throws new light on many popular and scientific beliefs about the origins and extent of the world s water

natural gas and petroleum deposits the mechanics of deep earthquakes the continuing but still not understood expansion of the earth and the causes of climate change author is a former dean at monash university

#### The Man Who Found Time

2008-12-15

discover the wonders of the incredible world we live in and unlock the secrets of our planet in this concise and useful guide for the whole family includes information on natural phenomena climate plants and more

# A Voyage of Discovery

2006-06-01

if you were to peel back the earth s surface like an orange then take a sly peek underneath what extraordinary things would you see subterranea is where the world s remaining mysteries are yet to be found for millennia across nations and cultures it has been a hotbed of fantastical stories it s where humans have kept their most sacred treasures and their darkest secrets it s where we have found evidence of our past and may at some point find an escape route for our uncertain future but what would we find there today from the underground cities of cappadocia to smuggling tunnels on the us mexico border caves full of tiny blind dragons and a seed vault located 1300km inside the arctic circle subterranea demonstrates that the world below our feet is every bit as vivid and evocative as the world we see around us lavishly illustrated and replete with maps and photographs of little explored locations subterranea is the unique untold and utterly unforgettable story of our planet from the inside

one of the greatest mysteries in reconstructing the history of life on earth has been the apparent absence of fossils dating back more than 550 million years we have long known that fossils of sophisticated marine life forms existed at the dawn of the cambrian period but until recently scientists had found no traces of precambrian fossils the quest to find such traces began in earnest in the mid 1960s and culminated in one dramatic moment in 1993 when william schopf identified fossilized microorganisms three and a half billion years old this startling find opened up a vast period of time some eighty five percent of earth s history to new research and new ideas about life s beginnings in this book william schopf a pioneer of modern paleobiology tells for the first time the exciting and fascinating story of the origins and earliest evolution of life and how that story has been unearthed gracefully blending his personal story of discovery with the basics needed to understand the astonishing science he describes schopf has produced an introduction to paleobiology for the interested reader as well as a primer for beginning students in the field he considers such questions as how did primitive bacteria pond scum evolve into the complex life forms found at the beginning of the cambrian period how do scientists identify ancient microbes and what do these tiny creatures tell us about the environment of the early earth and in a related chapter schopf discusses his role in the controversy that swirls around recent claims of fossils in the famed meteorite from mars like all great teachers schopf teaches the non specialist enough about his subject along the way that we can easily follow his descriptions of the geology biology and chemistry behind these discoveries anyone interested in the intriguing questions of the origins of life on earth and how those origins have been discovered will find this story the best place to start

## The Earth's Surface

2003

boldface glossary terms provide quick reference and clear scientific explanations

### Discovering the Healer Within

2014

a book of discovery the history of the world s exploration from the earliest times to the finding of the south pole a little old world no story is complete unless it begins at the very beginning but where is the beginning where is the dawn of geographya the knowledge of our earth what was it like before the first explorers made their way into distant lands every day that passes we are gaining fresh knowledge of the dim and silent past every day men are patiently digging in the old heaps that were once the sites of busy cities and as a result of their unwearying toil they are revealing to us the life stories of those who dwelt therein they are disclosing secrets writ on weather worn stones and tablets bricks and cylinders never before even guessed at thus we read the wondrous story of ancient days and breathlessly wonder what marvellous discovery will thrill us next for the earliest account of the old world a world made up apparently of a little land and a little water we turn to an old papyrus the oldest in existence which tells us in familiar words unsurpassed for their exquisite poetry and wondrous simplicity of that great dateless time so full of mystery and awe in the beginning god created the heaven and the earth and the earth was waste and void and darkness was upon the face of the deep and the spirit of god moved upon the face of the waters and god said let there be a firmament in the midst of the waters and let it divide the waters from the waters and god divided the waters which were under the firmament from the waters which were above the firmament and god said let the waters under the heaven be gathered into one place and let the dry land appear and god called the dry land earth and the gathering together of the waters called he seas thus beautifully did the children of men express their earliest idea of the

world s distribution of land and water
