bioprocess engineering involves the design and development of equipment and processes for the manufacturing of products such as food feed pharmaceuticals nutraceuticals chemicals and polymers and paper from biological materials it also deals with studying various biotechnological processes bioprocess kinetics and systems engineering first of its kind contains systematic and comprehensive content on bioprocess kinetics bioprocess systems sustainability and reaction engineering dr shijie liu reviews the relevant fundamentals of chemical kinetics including batch and continuous reactors biochemistry

microbiology molecular biology reaction engineering and bioprocess systems engineering introducing key principles that enable bioprocess engineers to engage in the analysis optimization design and consistent control over biological and chemical transformations the quantitative treatment of bioprocesses is the central theme of this book while more advanced techniques and applications are covered with some depth many theoretical derivations and simplifications are used to demonstrate how empirical kinetic models are applicable to complicated bioprocess systems contains extensive illustrative drawings which make the understanding of the subject easy contains worked examples of the various process parameters their significance and their specific practical use provides the theory of bioprocess kinetics from simple concepts to complex metabolic pathways incorporates sustainability concepts into the various bioprocesses

mammals are the so called pinnacle group of vertebrates successfully colonising virtually all terrestrial environments as well as the air bats and sea especially pinnipeds and cetaceans how mammals function and survive in these diverse environments has long fascinated mammalogists comparative physiologists and ecologists ecological and environmental physiology of mammals explores the physiological mechanisms and evolutionary necessities that have made the spectacular adaptation of mammals possible it summarises our current knowledge of the complex and sophisticated physiological

approaches that mammals have for survival in a wide variety of ecological and environmental contexts terrestrial aerial and aquatic the authors have a strong comparative and quantitative focus in their broad approach to exploring mammal ecophysiology as with other books in the ecological and environmental physiology series the emphasis is on the unique physiological characteristics of mammals their adaptations to extreme environments and current experimental techniques and future research directions are also considered this accessible text is suitable for graduate level students and researchers in the fields of mammalian comparative physiology and physiological ecology including specialist courses in mammal ecology it will also be of value and use to the many professional mammalogists requiring a concise overview of the topic
