Solve Your Child's Sleep Problems 2006-05-23 presents a unique study of integrative problem solving ips the consideration of decadence is essential in the scientific study of

environmental and other problems and their rigorous solution because the broad context within which the problems emerge can affect their solution stochastic reasoning underlines the conceptual and methodological framework of ips and its formulation has a mathematical life of its own that accounts for the multidisciplinarity of real world problems the multisourced uncertainties characterizing their solution and the different thinking modes of the people involved only by interpolating between the full range of disciplines including stochastic mathematics physical science neuropsychology philosophy and sociology and the associated thinking modes can scientists arrive at a satisfactory account of problem solving and be able to distinguish between a technically complete problem solution and a solution that has social impact

The Multilevel Fast Multipole Algorithm (MLFMA) for Solving Large-Scale Computational Electromagnetics Problems 2018-12-14 solving the linear equation system n x n can also be a problem for a computer even when the number of equations and unknowns is relatively small a few hundred all existing methods are burdened by at least one of the following problems 1 complexity of computation expressed through the number of operations required to be done to obtaining solution 2 unrestricted growth of the size of the intermediate result which causes overflow and underflow problems 3 changing the value of some coefficients in the input system which causes the instability of the solution 4 require certain conditions for convergence etc in this paper an approximate and exact methods for solving a system of linear equations with an arbitrary number of equations and the same number of unknowns is presented all the mentioned problems can be avoided by the proposed methods it is possible to define an algorithm that does not solve the system of equations in the usual mathematical way but still finds its exact solution in the exact number of steps already defined the methods consist of simple computations that are not cumulative at the same time the number of operations is acceptable even for a relatively large number of equations and unknowns in addition the algorithms allows the process to start from an arbitrary initial n tuple and always leads to the exact solution if it exists
