at a time when computers are more widespread than ever intelligent interactive systems have become a necessity the term multimedia systems refers to the coordinated storage processing transmission and retrieval of multiple forms of information such as audio image video animation graphics and text the growth of multimedia services has been exponential as technological progress keeps up with the consumer s need for content the solution of one fits all is no longer appropriate for the wide ranges of users with various backgrounds and needs so one important goal of many intelligent interactive systems is dynamic personalization and adaptivity to users this book presents 37 papers summarizing the work and new research results presented at the 6th international conference on intelligent interactive multimedia systems and services kes iimss2013 held in sesimbra portugal in june 2013 the conference series focuses on research in the fields of intelligent interactive multimedia systems and services and provides an internationally respected forum for scientific research in related technologies and applications  
this book begins with an introduction to fundamental issues related to digital preservation metadata before proceeding to in depth coverage of issues concerning its practical use and implementation it helps readers to understand which options need to be considered in specifying a digital preservation metadata profile to ensure it matches their individual content types technical infrastructure and organizational needs further it provides practical guidance and examples and raises important questions it does not provide full fledged implementation solutions as such solutions can be developed only by the user in their own preservation context as such the book effectively bridges the gap between the formal specifications provided by standards organizations and the practical requirements of users
