understanding early China's military philosophy as an ongoing negotiation between three major alternatives: militarism, compartmentalism, and syncretism. Military thought in early China offers a look into China's historical experience with a perennial issue that is not only of continuing relevance to modern-day China but also pertinent to other world states seeking to sustain strong and harmonious societies with its close engagement with and nuanced interpretation of a truly impressive range of sources. This book illuminates a field that gets too little serious attention. Charles Sanft, author of *Communication and Cooperation in Early Imperial China*, publicizing the Qin dynasty drawing on the core values of Western civilization, the author refines the counterparts in Chinese civilization summarized as four core principles: duty before freedom, obedience before rights, community before individual, and harmony before conflict. Focusing on Guoxue or Sinology as the basis of his approach, the author provides detailed explanations of traditional Chinese values. Recent scholars have addressed the concept of Guoxue since the modern age, sorting through it and piecing it together, which has produced an extremely abundant range of information. However, given that the concepts and theories involved have been left largely unanalyzed, this book develops a theoretical treatment of them in several important respects. First, it analyzes the mindset of Guoxue, examining the dominant ideas and values of the era from which the term Guoxue arose, focusing on its connection to early changes and trends in society and culture and distinguishing three key phases of development. Past scholars mainly had in mind the range of objects studied in Guoxue when defining it, and what this book underscores is the meaning of Guoxue as a modern body of research. Secondly, it assesses several phases in the modern evolution of the body of Guoxue research from the beginning to the end of the 20th century, i.e., ending with the later phase of the National Heritage Movement. Third, and lastly, the book explores the various main modes of modern Guoxue, which correspond step by step with the evolutionary phases of Guoxue research. This book brings together two scholarly traditions: experts in Roman, Jewish, and Islamic law, an area where scholars tend to be familiar with work in each area, and experts in the legal traditions of South and East Asia, which have tended to be less interdisciplinary. The resulting mix produces new ways of looking at comparative law and legal history from a global perspective, and these essays contribute both to our understanding of comparative religion as well as comparative law. After the Warring States period, treated in part one of this set, there is no more fecund era in Chinese religious and cultural history than the period of division, 220-589 AD. During it, Buddhism conquered China, Daoism grew into a mature religion with independent institutions, and together with Confucianism, these three teachings, having each won its share of state recognition and support, formed a united front against Shamanism. While all four religions are covered, Buddhism and Daoism receive special attention in a series of parallel chapters on their pantheons, rituals, sacred geography, community organization, canon formation, impact on literature, and recent archaeological discoveries. This multi-disciplinary approach, without ignoring philosophical and theological issues, brings into sharp focus the social and historical matrices of Chinese religion. This new book provides a total solution for learning and teaching embedded system design based on the Freescale HCS12 9S12 microcontroller.
