In Search of Time

2009-10-20

an enjoyable and compelling ride through one of life s most fascinating enigmas what then is time if no one ask of me i know st augustine of hippo lamented but if i wish to explain to him who asks i know not who wouldn t sympathize with augustine s dilemma time is at once intimately familiar and yet deeply mysterious it is thoroughly intangible we say it flows like a river yet when we try to examine that flow the river seems reduced to a mirage no wonder philosophers poets and scientists have grappled with the idea of time for centuries the enigma of time has also captivated science journalist dan falk who sets off on an intellectual journey in search of time the quest takes him from the ancient observatories of stone age ireland and england to the atomic clocks of the u s naval observatory from the layers of geological deep time in an arizona canyon to albert einstein s apartment in switzerland along the way he talks to scientists and scholars from california to new york from toronto to oxford he speaks with anthropologists and historians about our deep desire to track time s cycles he talks to psychologists and neuroscientists about the mysteries of memory he quizzes astronomers about the beginning and end of time not to mention our latest theories about time travel and the paradoxes it seems to entail we meet great minds from aristotle to kant from newton to einstein and we hear from today s most profound thinkers roger penrose paul davies julian barbour david deutsch lee smolin and many more as usual dan falk s style combines exhaustive research with a lively accessible and often humorous style making in search of time a delightful tour through a most curious dimension

In Search of Time

time surrounds us it defines our experience of the world it echoes through our every waking hour time is the very foundation of conscious experience yet as familiar as it is time is also deeply mysterious we cannot see hear smell taste or touch it yet we do feel it or at least we think we feel it no wonder poets writers philosophers and scientists have grappled with time for centuries in his latest book award winning science writer dan falk chronicles the story of how humans have come to understand time over the millennia and by drawing from the latest research in physics psychology and other fields falk shows how that understanding continues to evolve in search of time begins with our earliest ancestors perception of time and the discoveries that led with much effort to the gregorian calendar atomic clocks and leap seconds falk examines the workings of memory the brain s remarkable bridge across time and asks whether humans are unique in their ability to recall the past and imagine the future he explores the possibility of time travel and the paradoxes it seems to entail falk looks at the quest to comprehend the beginning of time and how time and the universe may end finally he examines the puzzle of time s flow and the remarkable possibility that the passage of time may be an illusion entertaining illuminating and ultimately thought provoking in search of time reveals what some of our most insightful thinkers have had to say about time from aristotle to kant from newton to einstein and continuing with the brightest minds of today

robert hirsch s exploring color photography is the thinking photographer s guide to color imagemaking now in its sixth edition this pioneering text clearly and concisely instructs students and intermediate photographers in the fundamental aesthetic and technical building blocks needed to create thought provoking digital and analog color photographs taking both a conceptual and pragmatic approach the book avoids getting bogged down in complex ever changing technological matters allowing it to stay fresh and engaging known as the bible of color photography its stimulating assignments encourage students to be adventurous and to take responsibility for learning and working independently the emphasis on design and postmodern theoretical concepts stresses the thought process behind the creation of intriguing images it s extensive and inspiring collection of images and accompanying captions allow makers to provide insight into how photographic methodology was utilized to visualize and communicate their objectives the text continues to deliver inspiring leadership in the field of color photography with the latest accurate information ideas commentary history a diverse collection of contemporary images and expanded cellphone photography coverage a problem solving and writing chapter offers methods and exercises that help one learn to be a visual problem solver and to discuss and write succinctly about the concepts at the foundation of one s work exploringcolorphotography com the companion website has been revamped and updated to feature more student and teacher resources including a new web based timeline as it happened a chronological history of color photography

Universe on a T-Shirt

2013-05-01

no scientific quest is as compelling as the search for the key to understand the universe the elusive unified theory of everything a theory so concise it could fit on a t shirt lively and thought provoking universe on a t shirt tells the fascinating story of the search for the holy grail of physics dan falk places this intriguing story in its historical context tracing the quest from ancient greece to the breakthroughs of newton maxwell and einstein to the excitement over string theory and today s efforts to merge quantum theory with general relativity with as much emphasis on history as on science falk s accessible approach is ideal for anyone intrigued by the advances in modern physics but still wondering what theoretical physicists are searching for and why today s physicists use sophisticated methods but their goal the search for simplicity has not changed since the time of the ancient greeks universe on a t shirt is filled with quirky personalities brilliant minds and bold ideas high science and high drama an admirably concise and comprehensive overview of cosmology that offers intriguing insights into the philosophic and personal outlooks motivating the scientists involved from the ancient greeks through newton and einstein and stephen hawking and ed witten booklist
