the first ever successful computer with a gui ability to allow users to preview a document before printing and a mouse was the mac the following are the reasons why it has remained relevant all these years turned icons into art since mac was the first computer with a gui it was the first to have icons susan kare designed those first icons for mac macs beg to be networked back when the mac was launched computer networking was exotic and pricey but even then macs could be easily connected to each other hypercard partly inspired the the hypercard was created by bill atkinson in 1987 through this app anyone could create on screen cards with hyperlinks images or texts the mac laptop is advanced right out of the box it comes with many basic tools such as calendar management email etc however there is another world of powerful software for apple mac that will make complicated tasks easier although most of them are not free they only cost a few bucks and they are well worth it here are some of the best
