manner to solve typically encountered problems this results from numerous different conditions and principles involved in a problem that leads to many possible different solution methods to prescribe a set of rules for each of the possible variations would involve an enormous number of additional steps making this task more burdensome than solving the problem directly due to the expectation of much trial and error current textbooks normally explain a given principle in a few pages written by an accounting professional who has insight into the subject matter not shared by others these explanations are often written in an abstract manner that causes confusion as to the principle's use and application explanations then are often not sufficiently detailed or extensive enough to make the reader aware of the wide range of applications and different aspects of the principle being studied the numerous possible variations of principles and their applications are usually not discussed and it is left to the reader to discover this while doing exercises accordingly the average student is expected to rediscover that which has long been established and practiced but not always published or adequately explained the examples typically following the explanation of a topic are too few in number and too simple to enable the student to obtain a thorough grasp of the involved principles the explanations do not provide sufficient basis to solve problems that may be assigned for homework or given on examinations poorly solved examples such as these can be presented in abbreviated form which leaves out much explanatory material between steps and as a result requires the reader to figure out the missing information this leaves the reader with an impression that the problems and even the subject are hard to learn completely the opposite of what an example is supposed to do poor examples are often worded in a confusing or obscure way they might not state the nature of the problem or they present a solution which appears to have no direct relation to the problem these problems usually offer an overly general discussion never revealing how or what is to be solved many examples do not include accompanying diagrams or graphs denying the reader the exposure necessary for drawing good diagrams and graphs such practice only strengthens understanding by simplifying and organizing accounting processes students can learn the subject only by doing the exercises themselves and reviewing them in class obtaining experience in applying the principles with their different ramifications in doing the exercises by themselves students find that they are required to devote considerable more time to accounting than to other subjects because they are uncertain with regard to the selection and application of the theorems and principles involved it is also often necessary for students to discover those tricks not revealed in their texts or review books that make it possible to solve problems easily students must usually resort to methods of trial and error to discover these tricks therefore finding out that they may sometimes spend several hours to solve a single problem when reviewing the exercises in classrooms instructors usually request students to take turns in writing solutions on the boards and explaining them to the class students often find it difficult to explain in a manner that holds the interest of the class and enables the remaining students to follow the material written on the boards the remaining students in the class are thus too occupied with copying the material off the boards to follow the professor's explanations this book is intended

to aid students in accounting overcome the difficulties described by supplying detailed illustrations of the solution methods that are usually not apparent to students solution methods are illustrated by problems that have been selected from those most often assigned for class work and given on examinations the problems are arranged in order of complexity to enable students to learn and understand a particular topic by reviewing the problems in sequence the problems are illustrated with detailed step by step explanations to save the students large amounts of time that is often needed to fill in the gaps that are usually found between steps of illustrations in textbooks or review outline books the staff of rea considers accounting a subject that is best learned by allowing students to view the methods of analysis and solution techniques this learning approach is similar to that practiced in various scientific laboratories particularly in the medical fields in using this book students may review and study the illustrated problems at their own pace students are not limited to the time such problems receive in the classroom when students want to look up a particular type of problem and solution they can readily locate it in the book by referring to the index that has been extensively prepared it is also possible to locate a particular type of problem by glancing at just the material within the boxed portions each problem is numbered and surrounded by a heavy black border for speedy identification considered the industry s standard resource this guide helps accountants and financial managers understand the complexities of the specialized accounting and regulatory requirements of the health care industry updated for 2018 this edition has been prepared and reviewed by industry experts and provides hands on practical guidance for those who work in and with health care entities a critical resource for auditors this edition includes new accounting standards and relevant gasb and fasb updates including those related to private companies updates include fasb asu no 2014 09 revenue from contracts with customers topic 606 fasb asu no 2016 01 financial instruments overall subtopic 825 10 recognition and measurement of financial assets and financial liabilities fasb asu no 2016 14 not for profit entities topic 958 presentation of financial statements of not for profit entities sas no 133 auditor involvement with exempt offering documents gasb statement no 75 accounting and financial reporting for postemployment benefits other than pensions and certain issues related to opeb plan reporting gasb no 83 certain asset retirement obligations synopsis intermediate accounting by kieso weygandt and warfield is quite simply the standard by which all other intermediate accounting texts are measured through thirty years and twelve best selling editions the text has built a reputation for accuracy comprehensiveness and student success with this fourth edition accountants will acquire a practical set of tools and the confidence they need to use them effectively in making business decisions it better reflects a more conceptual and decision making approach to the material the authors follow a macro to micro strategy by starting with a discussion of real financial statements first rather than starting with the accounting cycle the objective is to establish how a financial statement communicates the financing investing and operating activities of a business to users of accounting information this motivates accountants by grounding the discussion in the real world showing them the relevance of the topics covered to
