this volume contains the papers presented at the nato advanced study institute on the interlinking of computer networks held between august 28th and september 8th 1978 at bonas france the development of computer networks has proceeded over the last few decades to the point where a number of scientific and commercial networks are firmly established albeit using different philosophies of design and operation many of these networks are serving similar communities having the same basic computer needs and those communities where the computer resources are complementary consequently there is now a considerable interest in the possibility of linking computer networks to provide resource sharing over quite wide geographical distances the purpose of the institute organisers was to consider the problems that arise when this form of interlinking is attempted the problems fall into three categories namely technical problems compatibility and management only within the last few years have the technical problems been understood sufficiently well to enable interlinking to take place consequently considerable value was given during the meeting to discussing the compatibility and management problems that require solution before x foreword global interlinking becomes an accepted and cost effective operation existing computer networks were examined in depth and case histories of their operations were presented by delegates drawn from the international community the scope and detail of the papers presented should provide a valuable contribution to this emerging field and be useful to communications specialists and managers as well as those concerned with computer operations and development

for more than 40 years ibm mainframes have supported an extraordinary portion of the world s computing work providing centralized corporate databases and mission critical enterprise wide applications the ibm system z the latest generation of the ibm distinguished family of mainframe systems has come a long way from its ibm system 360 heritage likewise its ibm z os operating system is far superior to its predecessors in providing among many other capabilities world class and state of the art support for the tcp ip internet protocol suite tcp ip is a large and evolving collection of communication protocols managed by the internet engineering task force ietf an open volunteer organization because of its openness the tcp ip protocol suite has become the

foundation for the set of technologies that form the basis of the internet the convergence of ibm mainframe capabilities with internet technology connectivity and standards particularly tcp ip is dramatically changing the face of information technology and driving requirements for even more secure scalable and highly available mainframe tcp ip implementations the ibm z os communications server tcp ip implementation series provides understandable step by step guidance about how to enable the most commonly used and important functions of z os communications server tcp ip this ibm redbooks publication explains how to set up security for the z os networking environment network security requirements have become more stringent and complex because many transactions come from unknown users and untrusted networks careful attention must be given to host and user authentication data privacy data origin authentication and data integrity we also include helpful tutorial information in the appendixes of this book because security technologies can be quite complex
