an exciting contribution to the field visual dysfunction in diabetes the science of patient impairment and improvement is designed with two overriding objectives to help readers understand the impact of vision impairment in people living daily with diabetes rather than considering diabetic retinopathy solely as a medical problem and to explore what

we know and don't know about the ways diabetes affect the eye with the plethora of new information being generated there are still a series of fundamental questions that must be addressed if effective treatments for diabetic retinopathy are to be found and applied developed by a renowned group of authorities visual dysfunction in diabetes the science of patient impairment and improvement offers responses and context for a range of questions such as do metabolic factors beyond glucose contribute to vision threatening diabetic retinopathy if so how do these lead to vision impairment is diabetic retinopathy a response to systemic metabolic abnormalities or are there unique ocular problems related to insulin resistance what is the relationship between the neural vascular and inflammatory abnormalities in diabetic retinopathy do they represent a pathological cascade induced sequentially or simultaneous responses to one or more metabolic perturbations the authors note that if we do not address these types of questions it is possible that the long process of developing new therapeutic s will target only one arm of the pathology and leave the retina open to damaging consequences of the others state of the art comprehensive and an invaluable addition the research and clinical literature visual dysfunction in diabetes the science of patient impairment and improvement offers guidance and a significant step toward new scientific approaches that can lessen the devastating vision impairment associated with diabetes

dysfunction functional impairment of the musculoskeletal system and related neural and vascular elements in the context of family medicine practice the book explains the clinical rationale for osteopathic manipulative treatment in specific situations and details procedures for treating common problems encountered in family medicine coverage begins with the philosophy and principles of osteopathic patient care two major sections focus on various patient populations and patients with various clinical conditions a special section covers practice issues such as office set up progress notes coding and the standardized medical record

Fascial Dysfunction 2018-11-01

spinal dysraphism sd is a congenital malformation that to a varying extent often severely affects the life of the child and the family most individuals with sd suffer from neurogenic bladder and bowel dysfunction with the risk of urinary tract infections renal deterioration urinary and fecal incontinence that affects social participation and quality of life negatively in newborns with sd early detection of neurogenic bladder dysfunction and determination of post void residual urine are required to determine the need of clean intermittent catheterization cic and follow up the non invasive method of four hour voiding observation with provocation test vop was used to evaluate bladder function in 50 newborn children with sd voiding patterns for the children were described and compared with those of 50 healthy newborns evaluated with vop in an earlier study comparison revealed significant differences among several variables in particular leakage at provocation test and not voiding with a stream were common

in newborns with sd but did not occur in healthy newborns vop is a non invasive standardized method to determine residual urine in newborns with sd it also adds information on voiding pattern frequency voiding with a stream and leakage at provocation findings in neonatal vop of the same cohort of newborns with sd were then related to radiology presence of urinary tract infections during the first year and urodynamic findings and use of cic at the age of one year it was found that in children with sd not voiding with a stream may have a predictive value for the need of cic at the age of one year followed probably by lifelong cic despite this the presence of an open sd per se has stronger predictive value and each child needs to be evaluated individually while considering a number of factors the main value of vop may be as a structured non invasive screening method to uncover neurogenic bladder sphincter dysfunction in the newborn studies with a larger number of subjects than the present are needed to evaluate the potential of vop in newborns with closed spinal dysraphism in whom the neurological consequences vary a retrospective analysis detected renal damage on dmsa scintigraphy in 5 of 41 children with sd who were followed according to a proactive national program with minimal use of surgery median follow up time was 10 years high baseline pressure was confirmed as a risk factor for renal damage compliance with treatment and follow up is likely to be an important factor for renal health therefore efforts to support children and their families are crucial a questionnaire based study of 107 children with sd age 6 16y in sweden and norway examined aspects of treatment for neurogenic bowel dysfunction focusing on incontinence independence general satisfaction and quality of life guidelines

found that transanal irrigation tai and antegrade colonic enemas ace are effective treatments but are time consuming and difficult to perform independently the majority of children using tai 72 and ace 63 never went to the toilet alone to empty their bowels as children achieving independence on the toilet reported higher quality of life efforts to support independence are beneficial continent self managing children with healthy kidneys enjoy high quality of life and contribute more fully to society therefore further research is required to investigate and develop existing and new technologies and methods that mitigate the problems related to sd and to make them accessible to all children with spinal dysraphism under de senaste 50 åren har det skett en enastående utveckling av möjligheterna för barn som föds med ryggmärgsbråck tidigare har majoriteten av barn med ryggmärgsbråck avlidit redan som spädbarn men idag överlever de flesta till vuxen ålder utan aktiva insatser och uppföljning är dock risken för medicinska problem och allvarlig påverkan på livet mycket stor nu när nästan alla barn överlever ligger fokus på att också nå ökad livskvalitet och självständighet för personer med ryggmärgsbråck nästan alla med ryggmärgsbråck måste hantera en allvarlig påverkan på blåsan och tarmen med risk för njurskador inkontinens och förstoppning i avhandlingens två första studier värderade vi en metod att med minimalt obehag för barnet bedöma blåsfunktionen detta för att kunna skilja ut de barn som behöver genomgå mer avancerade undersökningar och få hjälp med blåstömningen genom täta tappningar med kateter så kallad ren intermitterande kateterisering rik när vi jämförde resultatet av testet för 50 nyfödda med ryggmärgsbråck med samma undersökning av

50 friska nyfödda fann vi stora skillnader mest tydligt var att de flesta nyfödda med ryggmärgsbråck 69 men inga friska nyfödda läckte urin när man tryckte över blåsan av nyfödda med ryggmärgsbråck kissade de flesta 74 inte med stråle vilket alla friska nyfödda gjorde att inte kissa med stråle talade också starkt för att barnet skulle komma att behöva hjälp med rik för att tomma blåsan vid ett års ålder och då sannolikt livet ut sammantaget visade avhandlingens två första arbeten att den metod för bedömning av blåsfunktion vi undersökt kan användas för att styra uppföljning och behandling av nyfödda med ryggmärgsbråck avhandlingens tredje studie visade att aktiv uppföljning av barnen enligt ett nationellt vårdprogram lyckades förhindra njurskador hos de flesta men att höga tryck i urinblåsan och återkommande urinvägsinfektioner ökade risken för skador Även familjernas förmåga att i en pressad vardag klara av att genomföra de ofta krävande behandlingar och undersökningar som rekommenderas verkade vara viktig för att förhindra njurskador stöttning av familjerna är därför viktig avhandlingens fjärde arbete berörde tarmen som nästan alltid är påverkad vid ryggmärgsbråck med risk för svår förstoppning och avföringsläckage detta har påtaglig påverkan på barnen och deras familjer en tredjedel av de 107 familjerna i vår enkätundersökning i sverige och norge barn 6-16 år beskrev att man fått avstå från aktiviteter såsom resor på grund av barnets tarmproblem och de barn som hade avföringsläckage rapporterade tydligt lägre livskvalitet än andra trots denna allvarliga påverkan finns det hittills inga studier som jämför de olika behandlingar som barnet kan använda i vår enkät kartlade vi därför vilka metoder som användes och hur bra de fungerade vid studien

frågor till både barn och föräldrar särskilt om avföringsläckage hur nöjd man var med metoden barnens livskvalitet och självständighet på toaletten det var utifrån svaren tydligt att båda de vanligaste typerna av tarmsköljning var effektiva men tidskrävande och svara för barn och ungdomar att klara att utföra på egen hand ingen metod visade sig överlägsen den andra men de barn som klarade att skota tarmtomningen själva skattade sin livskvalitet klart högre än övriga vi drar därför slutsatsen att det är viktigt att vårdpersonal diskuterar de olika behandlingsalternativen med barn och föräldrar och tillsammans med dem väljer den metod som passar det enskilda barnet bäst då skapas bästa förutsättningar för att gemensamt arbeta vidare för att uppnå största möjliga självständighet självständiga individer med friska njurar och utan urin och avföringsinkontinens upplever högre livskvalitet och behöver mindre sjukvård och andra samhällsinsatser det behövs mer forskning för att utveckla existerande och nya metoder att hantera de allvarliga komplikationer som riskerar att drabba barn och vuxna med ryggmärgsbräck

concepts of mb mentioning essential experimental data yet focusing mainly on its application in the care of critically ill patients in an easy to read format the 18 chapters were organized in a didactically structured order distributed in four parts the first part introduces the general conceptual aspects and physiology of the endothelium the second part presents the particularities of endothelial dysfunction in different types of shock methylene blue is discussed in detail in the third part in the fourth part particular situations of endothelial dysfunction such as heart surgery and organ transplantation are described additionally the two complementary subjects of acid base balance and the therapeutic use of inhaled nitric oxide are mentioned finally looking for therapeutic alternatives for what we classify as vasoplegic endothelial dysfunction mb remains promising as an adjuvant to sympathomimetic amines the combination of three recently proposed concepts may be useful in obtaining better results against the high mortality rates in critically ill patients these three concepts are wide spectrum vasopressors vasopressor economy strategies and microcirculation protection against the harmful effects of using high concentrations of amines this book s translational approach will appeal to a variety of readers within the health specialties of medicine biomedicine physiotherapy nursing odontology and basic science

Immune Dysfunction and Immunotherapy in Heart Disease

2012-01-09

this book describes an overlooked solution to a long standing problem in health care the problem is an informational supply chain that is unnecessarily dependent on the minds of doctors for assembling patient data and medical knowledge in clinical decision making that supply chain function is more than the human mind can deliver yet dependence on the mind is built into the traditional role of doctors who are educated and licensed to rely heavily on personal knowledge and judgment the culture of medicine has long been in denial of this problem even now that health information technology is increasingly used and even as artificial intelligence ai tools are emerging ai will play an important role but it is not a solution the solution instead begins with traditional software techniques designed to integrate novel functionality for clinical decision support and electronic health record ehr tools that functionality implements high standards of care for managing health information this book describes that functionality in some detail this description is intended in part to be a starting point for developers in the open source software community who have an opportunity to begin developing an integrated cloud based version of the tools described working with interested clinicians patients and others the tools grew out of work beginning more than six decades ago when this book s lead author deceased originated problem lists and structured notes in medical records the electronic tools he later developed led him to reconceive education and licensure for doctors and other health professionals which are also part of the solution this
