The Last Days of the Dinosaurs 2022-04-26 in the last days of the dinosaurs riley
black walks readers through what happened in the days the years the centuries
and the million years after the impact tracking the sweeping disruptions that
overtook this one spot and imagining what might have been happening elsewhere
on the globe life s losses were sharp and deeply felt but the hope carried by the
beings that survived sets the stage for the world as we know it now picture
yourself in the cretaceous period it s a sunny afternoon in the hell creek of ancient
montana 66 million years ago a triceratops horridus ambles along the edge of the
forest in a matter of hours everything here will be wiped away lush verdure will be
replaced with fire tyrannosaurus rex will be toppled from their throne along with
every other species of non avian dinosaur no matter their size diet or disposition
they just don t know it yet the cause of this disaster was identified decades ago an
asteroid some seven miles across slammed into the earth leaving a geologic wound
over 50 miles in diameter in the terrible mass extinction that followed more than
half of known species vanished seemingly overnight but this worst single day in the
history of life on earth was as critical for us as it was for the dinosaurs as it
allowed for evolutionary opportunities that were closed for the previous 100
million years
