subject than can be covered in a single semester the result is the opportunity to pick and choose those experiments that are more closely related to the curriculum of the college or university all of the experiments have been run and tested during the 13 editions of the text with changes made as needed the result is a set of laboratory experiments that should have each step clearly defined and results that closely match the theoretical solutions two experiments were added to the ac section to provide the opportunity to make measurements that were not included in the original set developed by professor david krispinsky of rochester institute of technology they match the same format of the current laboratory experiments and cover the material clearly and concisely all the experiments are designed to be completed in a two or three hour laboratory session in most cases the write up is work to be completed between laboratory sessions most institutions begin the laboratory session with a brief introduction to the theory to be substantiated and the use of any new equipment to be used in the session

**Laboratory Manual for Majors General Biology 2008-08** this laboratory manual presents a curriculum that is organized around an atoms first approach to general chemistry our motivation for writing this manual is to 1 tap into the natural curiosity present in all of us and provide engaging experiments that students will find interesting 2 emphasize topics that students find particularly challenging in the general chemistry lecture course and 3 create a laboratory environment that encourages students on occasion to solve puzzles and not just follow recipes all too often students view general chemistry lab as a boring exercise in which an exact set of instructions is followed leading to an answer that in many cases results in a good grade regardless of how much learning has taken place to these students the successful lab is the one that takes the least amount of time unfortunately a huge opportunity to get students truly turned on to science is missed to us the laboratory represents high stakes ground for engagement and relatively low stakes for grading as the laboratory is typically a single credit course or minor component to the lecture grade thus while the rigor of the experiments in this manual can be tuned to meet the needs of the instructor our hope is that students will be encouraged to play safely with chemical concepts and laboratory techniques with grades simply being a natural consequence of their laboratory actions to facilitate such a mindset this manual has been written to provide instructors with a weekly tool that can attract and keep student interest while providing important connections to the material covered in an atoms first lecture course our philosophy student curiosity leads to engagement which leads to discovery which leads to learning the manual is for a freshman level general chemistry laboratory course and serves as an ideal supplement for any atoms first general chemistry textbook such as chemistry atoms first by julia burdge and jason overby it is designed for students at all levels from those seeing chemistry for the first time to chemistry majors
