this book discusses surrogate modeling of high frequency structures including antenna and microwave components the focus is on constrained or performance driven surrogates the presented techniques aim at addressing the limitations of conventional modeling methods pertinent to the issues of dimensionality and parameter ranges that need to be covered by the surrogate to ensure its design utility within performance driven methodologies mitigation of these problems is achieved through appropriate confinement of the model domain focused on the regions promising

from the point of view of the relevant design objectives this enables the construction of reliable surrogates at a fraction of cost required by conventional methods and to accomplish the modeling tasks where other techniques routinely fail the book provides a broad selection of specific frameworks extensively illustrated using examples of real world microwave and antenna structures along with numerous design examples furthermore the book contains introductory material on data driven and physics based surrogates the book will be useful for the readers working in the area of high frequency electronics including microwave engineering antenna design microwave photonics magnetism especially those that utilize electromagnetic em simulation models in their daily routines covers performance driven and constrained modeling methods not available in other books to date discusses of a wide range of practical case studies including a variety of microwave and antenna structures includes design applications of the presented modeling frameworks including single and multi objective parametric optimization

over the past ten years the pisa assessment has risen to strategic prominence in the international education policy discourse sponsored organized and administered by the organization for economic cooperation and development oecd pisa seems well on its way to being institutionalized as the main engine in the global accountability regime the goal of this book is to problematize this development and pisa as an institution building force in global education it scrutinizes the role of pisa in the emerging regime of global educational governance and questions the presumption that the quality of a nation s school system can be evaluated through a standardized assessment that is insensitive to the world s vast cultural and institutional diversity the book raises the question of whether pisa s dominance in the global educational discourse runs the risk of engendering an unprecedented process of worldwide educational standardization for the sake of hitching schools more tightly to the bandwagon of economic efficiency while sacrificing their role to prepare students for independent thinking and civic participation

most local government managers would like to use information technology it that helps their organizations serve the community by reducing costs expanding services and eliminating risk sometimes it s not so easy this book with full color illustrations is intended to be a practical guide for local government managers wanting to maximize the value of it in their organizations it provides recommendations for aligning it with local government s strategic vision identifying opportunities to leverage technology as well as tackling the ever challenging step of getting

started simply adopting individual technologies to fulfill each need as it arises is not the answer this short sighted approach has helped to install many of the incompatible technologies that live within local governments today technology must be approached from the broader perspective as facilitator of an integrated organization that works together as our governments adopt more complex technologies quality management systems are needed to ensure that there is alignment not conflict with the goals of the business if problems exist within the it infrastructure there are a whole host of headaches and issues that can slow or even stop government services at the core it is important to understand industry norms and how your it group compares in terms of functionality structure and cost to other successful government it systems if organizational processes are designed collectively and it is managed properly local government managers will be empowered to save taxpayer dollars reduce business risk enhance services delivered to the community and even identify new revenue streams local governments are in the process of a metamorphosis organizations are transitioning from a collection of isolated departments with separate functions and deliverables to a unified business that shares information through linked processes at the heart of the transformation is visionary leadership combined with dynamic and clear management of the technology along with this spirit of transformation we must be able to use our it resources more wisely communities are increasing their demands for services while challenging economic times are intensifying downward fiscal pressures as a result local governments are searching for ways to lower their cost to serve examining both what services are provided and how they are delivered changing political leadership and evolving technologies can often make achieving effective it seem impossible written by management and it experts with years of hands on experience working with city and county managers transforming government is a hands on manual that outlines the steps to align it with local government s strategic vision maximize the value of it and begin the transformation
