Eminent Europeans; Studies in Continental Reality

2012-08-01

unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

Eminent Europeans

1924

this work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it this work was reproduced from the original artifact and remains as true to the original work as possible therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work this work is in the public domain in the united states of america and possibly other nations within the united states you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work as a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public we appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant

Eminent Europeans

2003-01-01

in these spirited essays john d caputo continues the project he launched with radical hermeneutics of making hermeneutics and deconstruction work together caputo claims that we are not born into this world hard wired to know being truth or the good and we are not vessels of a divine or other omnipotent supernatural force focusing on how various contemporary philosophers develop aspects of this fragmented view of the life world in areas such as madness friendship democracy gender science the end of ethics religion and mysticism this animated study by one of america s leading continental philosophers shakes the foundations of religion and philosophy even as it gives them new life

Eminent Europeans; Studies in Continental Reality

2016-05-07

force of imagination the sense of the elemental john sallis a bold and original investigation into how imagination shapes thought and feeling this is a bold new direction for the author one that he takes in an arresting and convincing manner a powerful original approach to what others call ecology but what sallis shows to be a question of the status of the earth in philosophical thinking at this historical moment edward s casey in this major original work john sallis probes the very nature of imagination and reveals how the force of imagination extends into all spheres of human life while drawing critically on the entire history of philosophy sallis s work takes up a vantage point determined by the contemporary deconstruction of the classical opposition between sensible and intelligible thus in reinterrogating the nature of imagination force of imagination carries out a radical turn to the sensible and to the elemental in nature liberated from subjectivity imagination is shown to play a decisive role both in drawing together the moments of our experience of sensible things and in opening experience to the encompassing light atmosphere earth and sky set within this elemental expanse the human sense of time of self and of the other proves to be inextricably linked to imagination and to nature by showing how imagination is formative for the very opening upon things and elements this work points to the revealing power of poetic imagination and casts a new light on the nature of art john sallis is liberal arts professor of philosophy at pennsylvania state university his previous books include being and logos reading the platonic dialogues shades of painting at the limit stone chorology on beginning in plato s timaeus all published by indiana university press crossings nietzsche and the space of tragedy and double truth studies in continental thought john sallis editor contents prolusions on not simply beginning remembrance duplicity of the image spacing the image tractive imagination the elemental temporalities proprieties poetic imagination

Literature in Action: Studies in Continental and Commonwealth Society

1972

an important new book that addresses central themes in being and nothingness and compares some of sartre s views to those of his leading contemporary from the analytic school p f strawson

More Radical Hermeneutics

2000-07-22

ichnology is the science of marks tracks trails traces structures and other sources of evidence of biological activity beyond the living beings themselves when studied both in continents and oceans in spite of its scientific value and interdisciplinary contribution particularly in south america in the complex task of identifying ancient environments information is dispersed and sometimes even ignored this book has recovered the remarkably abundant information that ichnology of terrestrial environments has incorporated the studied geographical regions

are the pampas of argentina vast lowlands with a wide latitudinal distribution in between the warm and wet subtropical areas and the cold deserts of patagonia pedogenetic processes preserve tracks and marks found in sediments rock surfaces and soils revealing the activity of life forms this book refers to a variety of signs of biological activity particularly in ancient soils this volume includes abundant original information and a meticulous revision of paleo ichnological investigations most by the author himself one of the most important south american specialists during many decades of his dedication to scientific research the book includes a review of the stratigraphic sequences of the cenozoic chronostratigraphic scheme firstly the author provides a scrutiny of the continental ichnofacies and the ichnological record of the south american cenozoic age this is followed by chapters dedicated to the faunal associations of vertebrates with very valuable information about the past climatic events and biogeographical changes of undoubted value for those scholars interested in vertebrate paleontology likewise the highly relevant ichnotaxonomy is also developed exhaustively with special reference to the essential activity of insects in the paleosols mostly ants and termites divfinally this book presents the most complete extensive and up dated bibliography in the subject which is probably unique as such for southern south america and most of the world certainly this is a book that will provide valuable scientific tools for those specialists interested in this infrequent discipline either paleontologists biologists geologists pedologists and sedimentologists

Explosion Studies of Continental Structure

1961

covering the complete development of post kantian continental philosophy this volume serves as an essential reference work for philosophers and those engaged in the many disciplines that are integrally related to continental and european philosophy

Force of Imagination

2000

reveals the intimate connection between beauty and the philosophical life

Commise 1204

2005

this is a monograph investigating the idea and role of disinterest as it occurs in continental philosophy particularly in the wake of derrida and lévinas

Explosion Studies of Continental Structure

1961

approximately 70 percent of the world's population is concentrated in the coastal borderlands which geologists recognize to be the present continental margins this new book on these continental margins provides a detailed account of a meeting which brought together specialists in marine and terrestrial geology geochemistry and geophysics the workshop garnered widespread support and enthusiasm for a new direction in margins research focused on interdisciplinary studies of the fundamental processes of continental margin evolution scientific problems and solutions were identified for both divergent and convergent margins results of the workshop show that many of the fundamental plate interaction processes are common to all margins whether formed by extension contraction or translation this conclusion suggests a unified approach to margins research a margins initiative has been proposed to follow up on the workshop results by developing science programs aimed at understanding the processes that control the initiation and evolution of continental margins

Hegel and After

1975-01-01

taken together these intimate self portraits provide a vibrant overview of the multiplicity and depth of continental philosophy in america
jacket

Sartre's Phenomenology

2007-07-24

a report by the physical oceanography panel of the national research council of the united states into the physical oceanographic aspects of the environmental studies program the committee evaluated the quality and relevance of studies carried out in waters under federal control which extend from the limits of state jurisdictions 3 12 miles offshore and include the central and outer continental shelf waters and the continental slope of the united states

Ichnology of the Lowlands of South America

2020-12-16

our era is profoundly marked by the phenomenon of exile and it is has become increasingly urgent to rethink the concept of exile and our stance towards it this renewed reflection on the problem of exile brings to the fore a number of questions regarding the traditionally negative

connotation of exile is there not another way to understand the condition of exile permeated with references to the stranger the other and exteriority the philosophy of emmanuel levinas signifies a positive understanding of exile this original and compelling book distills from levinas s philosophy a wisdom of exile for the first time shedding a positive light on the condition of exile itself abi doukhan argues that levinas s philosophy can be understood as a comprehensive philosophy of exile from his ethics to his thoughts on society love knowledge spirituality and art thereby presenting a comprehensive view of the philosophy of levinas himself as well as a renewed understanding of the wealth and contribution of exile to a given society

A Companion to Continental Philosophy

1998-06-08

what happens when something happens in thinking the event senior continental philosophy scholar françois raffoul undertakes a philosophical inquiry into what constitutes an event as event its very eventfulness not what happens or why it happens but that it happens and what happening means if as leibniz posited it is true that nothing happens without a reason does this principle of reason have a reason for raffoul the event always breaks the demands of rational thought bringing together philosophical insights from heidegger derrida nancy and marion raffoul shows how the event in its disruptive unpredictability always exceeds causality subjectivity and reason it is that pure event each time happening outside or without reason which remains to be thought and which is the focus of this work in the final movement of the book raffoul takes on questions about the inappropriability of the event and the implications this carries for ethical and political considerations when thinking the event in the wake of the exhaustion of traditional metaphysics the notion of the event comes to the fore in an unprecedented way with key implications for philosophy ontology ethics and theories of selfhood

Plato and the Question of Beauty

Derrida and Disinterest

2005-05-24

the international handbook of research in professional and practice based learning discusses what constitutes professionalism examines the concepts and practices of professional and practice based learning including associated research traditions and educational provisions it also explores professional learning in institutions of higher and vocational education as well the practice settings where professionals work and

learn focusing on both initial and ongoing development and how that learning is assessed the handbook features research from expert contributors in education studies of the professions and accounts of research methodologies from a range of informing disciplines it is organized in two parts the first part sets out conceptions of professionalism at work how professions work and learning can be understood and examines the kinds of institutional practices organized for developing occupational capacities the second part focuses on procedural issues associated with learning for and through professional practice and how assessment of professional capacities might progress the key premise of this handbook is that during both initial and ongoing professional development individual learning processes are influenced and shaped through their professional environment and practices moreover in turn the practice and processes of learning through practice are shaped by their development all of which are required to be understood through a range of research orientations methods and findings this handbook will appeal to academics working in fields of professional practice including those who are concerned about developing these capacities in their students in addition students and research students will also find this handbook a key reference resource to the field

Margins

1990-02-01

this book presents outstanding articles addressing various aspects related to the ancient silk road in particular the cultural political and economic interactions that took place among the civilizations and cultures on the eurasian continent in addition the articles help to reveal the hallmark features of cultural communication in inner asia in different historical periods the book develops a new approach to studying the civilizations of the silk road promotes interdisciplinary and multi dimensional research sets a new direction for chinese ancient classics and western sinology and presents the latest discoveries including both archaeological finds and historical documents

Studies in the History of Classical Teaching

1911

since the early 1970s experts have recognized that petroleum pollutants were being discharged in marine waters worldwide from oil spills vessel operations and land based sources public attention to oil spills has forced improvements still a considerable amount of oil is discharged yearly into sensitive coastal environments oil in the sea provides the best available estimate of oil pollutant discharge into marine waters including an evaluation of the methods for assessing petroleum load and a discussion about the concerns these loads represent featuring close up looks at the exxon valdez spill and other notable events the book identifies important research questions and makes recommendations for better analysis of and more effective measures against pollutant discharge the book discusses input where the discharges come from including the role of two stroke engines used on recreational craft behavior or fate how oil is affected by processes such as evaporation as it moves through the marine environment effects what we know about the effects of petroleum hydrocarbons on marine organisms and ecosystems providing a needed update on a problem of international importance this book will be of interest to energy policy makers industry officials and managers engineers and researchers and advocates for the marine environment

Portraits of American Continental Philosophers

1999

this multidisciplinary anthology offers deep insight into africa and its people leaving readers with a much greater understanding of the continent and its issues

Geological Survey Research, 1975

1975

inspired by a gsa penrose conference held in 2005 cosponsored by the international association of sedimentologists and the british sedimentological research group the 17 papers in this volume explore sedimentary environments in arc collision zones and their utility in recording the evolution of modern and ancient convergent margins the first set of papers in the collection focuses on formation and evolution of the sedimentary record in arc settings and arc collision zones concentrating on modern intra oceanic examples papers include studies of flexural modeling and factors that affect development of siliciclastic and carbonate deposits around modern arcs the second half of the volume presents new applications of arc sedimentary records these relate primarily to constraining tectonic events in the evolution of arc systems but also concern the links among tectonic uplift collision and geomorphic and climatic feedback mechanisms in arc collision zones publisher s website

Assessment of the U.S. Outer Continental Shelf Environmental Studies Program

1990-02-01

this document is the development plan for the studies program that was named later in the year as outer continental shelf environmental assessment program the document defines the program components and describes the assessment elements needs and tasks for each subprogram biology chemistry geology bathymetry and physical oceanography and meteorology the purpose of the program was to obtain baseline information on the marine environmental of the outer continental shelf areas off alaska to access effects of future oil and gas development in those areas and to protect the environment

Arctic Research of the United States

1992

assessment of the u s outer continental shelf environmental studies program reviews the ecological studies done by the environmental

studies program of the minerals management service this program which has spent 10 million a year on ecological studies in recent years is designed to provide information to predict and manage the environmental effects of outer continental shelf oil and gas activities the book considers studies on marine mammals and endangered species birds benthic organisms fisheries and marine ecosystems and makes recommendations for future studies

Assessment of the U.S. Outer Continental Shelf Environmental Studies Program

1990-02-01

this proceedings book investigates the possibilities for creating new models of the continental lithosphere structure by integrating methods from geothermodynamics and deep geoelectrics it particularly focuses on the use of powerful controlled sources of electromagnetic field to study the nature of deep geophysical boundaries it also presents research related to the transition boundary between the brittle and quasiplastic states of earth s crust matter and the position of creep areas in earth s crust as well as geothermal and rheological studies in combination with the deep electromagnetic soundings a promising direction that allows the tectonophysical reconstruction of natural stresses in the lithosphere the experimental study results and tectonophysical modeling are discussed in the context of the fennoscandinavian shield the indian craton the himalayas eastern tibet and the eurasian continent as a whole the book appeals to researchers interested in solid earth physics
