understanding the cognitive aspects of neurological disorders is essential to manage effectively patients suffering from these conditions this book begins by outlining the various cognitive domains and how these can be tested before covering in depth the cognitive deficits seen in prototypical neurodegenerative cognitive disorders alzheimer s disease frontotemporal dementias huntington s disease prionoses and other common neurological disorders that may be complicated by cognitive impairment stroke multiple sclerosis parkinson s disease brain tumours this second edition has been completely revised and updated with new material added throughout including two new chapters sleep related disorders and psychiatric disorders in the cognitive function clinic this an essential reference for all neurologists not just for those with an interest in cognitive disorders general physicians and specialists who deal with endocrine metabolic vascular or infective disorders that may compromise cognitive function and allied health professionals who work with cognitively impaired patients will also find this text useful

this book focuses on advances in our understanding of the regulatory mechanisms of brain iron uptake iron homeostasis and iron metabolism in the pathophysiology and pharmacology of cns disease models dysregulation of brain iron homeostasis can lead to severe pathological changes in the neural system iron deficiency can slow down the development of the neural system and cause language and motion disorders while iron overload is closely related to neurodegenerative diseases although some current books include chapters on iron metabolism and certain neurodegenerative diseases this is the first systematic summary of the latest discoveries regarding brain iron metabolism and cns diseases by providing novel and thought provoking insights into the mechanisms and physiological significance of brain iron metabolism and related diseases the book stimulates further new research directions it helps graduate students and researchers gain an overall picture of brain iron metabolism and the pathogenesis of neurodegenerative diseases and also offers pharmaceutical companies inspiration for new treatment strategies for cns diseases

the global ageing society has significantly increased the need for implant materials which not only replace damaged or lost tissue but are also able to regenerate it the field of bioactive glasses has been expanding continuously over recent years as they have been shown to bond with hard and soft tissue release therapeutically active ions and be capable of enhancing bone formation and regeneration in addition they are successfully being used to re mineralise teeth thereby making bioactive glasses highly attractive materials in both dentistry and medicine understanding the multidisciplinary requirements set by the human body s environment and the special characteristics of the different families of bioactive glasses is a key in developing new compositions to novel clinical applications bioactive glasses aims to bridge the different scientific communities associated with the field of bioactive glasses with focus on the materials science point of view emerging applications covered include soft tissue regeneration wound healing vascularisation cancer treatment and drug delivery devices this book provides a comprehensive overview of the latest applications of bioactive glasses for material scientists

according to the most updated epidemiological studies cardiovascular disease remains a leading cause of death in fact despite substantial advances in the care of patients the incidence of cardiovascular disorders continues to increase therefore the search for novel mechanisms and therapeutics is desperately needed and translational studies represent the best strategy to uncover novel therapeutic targets reduce mortality and improve the quality of life this book gathers original articles and systematic reviews that have both a strong basic research background and clear translational potential all the studies have been peer reviewed by at least

two experts in the field these contributions provide an updated systematic overview that examines in detail the mechanisms of the main cardiovascular and metabolic disorders including ischemic and non ischemic heart failure hypertension thromboembolism atherosclerosis stroke diabetes mellitus dyslipidemia metabolic syndrome valvulopathies peripheral artery disease in the final chapter the functional role of the endothelium in the systemic manifestations of covid 19 is described

this book systematically summarizes the ideas and technologies used in urine proteome analysis it argues that change is the core of biomarker definition since the body uses its homeostatic mechanisms to correct changes in the blood this means that urine is probably a better source of biomarkers than blood a roadmap to the urinary biomarker era is proposed and researchers are reminded of the potential opportunities and risks in their study design kidney diseases are emphasized as they produce the most significant changes in urine this book tries to show researchers and graduate students who are in or entering the field all things considered rather than the current affair
