resources values and development contains many of amartya sen s path breaking contributions to development economics including papers on resource allocation in nonwage systems shadow pricing employment policy welfare economics poverty assessment gender based inequality and hunger and famines

## **Environmental Resource Valuation**

2012-12-06

allocation of natural resources has become a prominent concern at the local state and federal level competing uses for increasingly scarce resources are requiring that the relative values of those uses be investigated although many types of value are important in decision making this book is concerned with the economic value of natural resources economic values for certain natural resources are readily observable in markets for others however market prices are not available and estimates of value must be made through nonmarket valuation techniques the progress that has been made in improving the theory methods and applications of these techniques has been remarkable along with the progress however come new problems that must be addressed the chapters presented in this volume are a collection of examples of both progress and problems

## **Modoc National Forest (N.F.), Land and Resource(s) Management Plan (LRMP)**

guides in the application of linear programming to firm decision making with the goal of giving decision makers a better understanding of methods at their disposal useful as a main resource or as a supplement in an economics or management science course this comprehensive book addresses the deficiencies of other texts when it comes to covering linear programming theory especially where data envelopment analysis dea is concerned and provides the foundation for the development of dea linear programming and resource allocation modeling begins by introducing primal and dual problems via an optimum product mix problem and reviews the rudiments of vector and matrix operations it then goes on to cover the canonical and standard

forms of a linear programming problem the computational aspects of linear programming variations of the standard simplex theme duality theory single and multiple process production functions sensitivity analysis of the optimal solution structural changes and parametric programming the primal and dual problems are then reformulated and re examined in the context of lagrangian saddle points and a host of duality and complementary slackness theorems are offered the book also covers primal and dual quadratic programs the complementary pivot method primal and dual linear fractional functional programs and matrix game theory solutions via linear programming and data envelopment analysis dea this book appeals to those wishing to solve linear optimization problems in areas such as economics business administration and management agriculture and energy strategic planning public decision making and health care fills the need for a linear programming applications component in a management science or economics course provides a complete treatment of linear programming as applied to activity selection and usage contains many detailed example problems as well as textual and graphical explanations linear programming and resource allocation modeling is an excellent resource for professionals looking to solve linear optimization problems and advanced undergraduate to beginning graduate level management science or economics students
