doubt that in the spheres of doctrine and application both research and clinical medicine have distinguished themselves autonomously in many surgical fields orthopedics neurosurgery cardiovascular surgery thoracic surgery urology etc it is therefore difficult to define the present configuration of general surgery but without question abdominal surgery occupies a position of pre eminent importance within the general framework we are dealing in fact with pathological pictures which occur in a section of the body of vast proportions in which structures organs and morphologically complex spaces are arranged to carry out important functions they are therefore subject to considerably complex pathological alterations such as to establish an interesting field of diagnostic discussion and an exciting training ground for surgical activity it can be affirmed that the diagnosis and cures of abdominal surgical diseases constitute a test of the surgeon's experience diagnosis is often entrusted to a differential process the results of which may be confirmed today by complementary diagnostics this however must be guided by predominating clinical considerations the medical book ever written this is written with short punchy chapters making it a very difficult book to put down by the end I was a total enthusiast this is a text like no other I read unreservedly recommended to old and young alike a must have book I am about to end my chief year in general surgery residency my copy of the first edition shows the wear of half a dozen total read throughs and probably hundreds of referencings simply perfect the best choice in surgery for trainees it makes the more difficult surgery areas very easy to understand I recommend it to all surgeons one of the was performed by simple dermolipectomies with no attention to diastasis correction and muscular reinforcement and little regard for the final aesthetic result nowadays an abdominoplasty may be indicated for even the most demanding of patients details such as placement of the incision and umbilicoplasty are meticulously planned so as to conceal undesirable scars since the advent of suction assisted lipectomy in association with a classical operation or as an isolated procedure the plastic surgeon has become capable of remodeling the entire trunk assuring removal of considerable amounts of adipose tissue Drs Shiffman and Mirrafati have brought all of these aspects together in this most timely book aesthetic surgery of the abdominal wall here the reader will find an all encompassing textbook written in collaboration with outstanding colleagues all of whom have contributed to this field of plastic surgery that has been of particular interest to me I am sure that for both the younger and the more experienced surgeon this book will become a reference text covering all aspects of plastic abdominal surgery Ivo Pitanguy MD preface this book on aesthetic surgery of the abdominal wall is an attempt to bring together the existing knowledge on body contouring of the abdomen the major emphasis is on abdominoplasty and liposuction of the abdomen with the various combinations and techniques this is the first time a book about laparoscopy in emergency abdominal surgery has been published numerous articles have been published in specific surgical journals but until now there has not been a book that collates all the aspects of this little known field the aim of this volume is to achieve a complete and easy presentation of all the implications associated with laparoscopy in emergency abdominal surgery the book should be a manual that can be easily consulted by digestive general and specialized surgeons especially in an emergency the authors contributions are founded on evidence based medicine which give the book scientific credibility but this is coupled with their experience of daily practice which adds an important complementary dimension to evidence based medicine this is balanced by an emphasis on clarity and accessibility because the ultimate aim of the book is educational we hope this book will be frequently consulted in depth not only by specialist practitioners but also by undergraduate students new graduates and surgeons in training excerpt from

ix preface smart surgeons learn from their own mistakes smarter surgeons learn from mistakes of others some never learn you are a resident overworked and constantly tired sitting down with your mentor for a brief tutorial what do you want to get out of these few minutes to organize your thoughts and approaches to the particular problem to learn how he the weathered surgeon tackles it to grasp a few practical recipes or goodies and take home a message or two to laugh a bit and unwind this is also our goal in this book we hope that you are not repelled or offended by the non formal character of this book this is how emergency abdominal surgery is taught best by trial and error and repetitions with emphasis on basics this is not a complete textbook nor is it a cookbook type manual or discussion of case studies neither is it a collection of detailed lecture notes or exhaustive lists instead it consists of a series of informal uncensored chats between experienced surgeons and their trainees no percentages series elaborated figures or complicated algorithms are included only a surgeon s narrative explaining how he does it based on his experience and state of the art knowledge of the literature no references are included as it was our aim to put down nothing which has not been experienced confirmed and practiced in our own hands
