*The Code of Federal Regulations of the United States of America* 1954 the social question is back yet today's social question is not primarily between labour and capital as it was in the nineteenth century and throughout much of the twentieth the contemporary social question is located at the interstices between the global south and the global north it finds its expression in movements of people seeking a better life or fleeing unsustainable social political economic and ecological conditions it is transnationalized not only because migrants and their significant others entertain ties across the borders of national states staying in touch with family and friends receiving or sending financial remittances in transnational social spaces also of importance are cross border recruitment schemes for workers and the cross border diffusion of norms appealed to in the case of migration for example the social right to decent work as a human right moreover migration can become an issue of inclusion or exclusion in fields important to life chances in the emigration transit or immigration states a transnationalization of national states and as in the nineteenth century political conflicts arise constituting the social question as a public concern in earlier periods class differences dominated conflicts while class has always been criss crossed by manifold heterogeneities not least of all cultural ones around ethnicity religion and language it is these latter heterogeneities that have sharpened in situations of immigration and emigration over the past decades casting a wide net in terms of conceptual and empirical scope this book tackles both the social structure and the politics of social inequalities it sets a comprehensive agenda for research which also includes the public role of social scientists in dealing with the transnationalized social question

**Mathematical Analysis of Evolution, Information, and Complexity** 2009-07-10 sonar sound navigation and ranging systems have many similarities to radar and electro optical systems again detection is based on the propagation of waves between the target and detector there are active sonar systems where the wave propagates from the transmitter to the target and back to the receiver analogous to pulse echo radar there are also passive sonar systems where the target is the source of the energy which propagates to the receiver analogous to passive infrared detection therefore a great deal of what has been discussed about these systems will also apply to sonar sonar however differs fundamentally from radar and electro optics because the energy is transferred by acoustics waves propagating in water so we first begin by discussing the characteristics of acoustic waves
