even the best information is worthless if users can't find it providing user friendly structure and navigation is just as important as providing well written content however structuring user assistance isn't as simple and obvious as it may seem if you think that your document structure should follow the structure of your product's components and functions you're wrong if you think that the type of document that you prefer is the same type of document that your clients prefer you're wrong if you think that all the information that you have is important you're also wrong this book tells you how to structure index and link your documents so that readers actually find the information that your documents contain topics covered general structuring principles that all structural decisions have in common choosing media should you provide a printed or printable user manual pdf online help or both what information should go into the user manual and what information should go into online help which help format should you use can context sensitive help calls be implemented should you provide interactive features and social features planning documents should you put all information into one document or should you supply several user manuals for specific purposes and user groups how should you name your documents planning document sections what are the major sections that your documents should consist of are there any standard sections that you shouldn't forget planning topics what types of information do your clients need how should you build and name the individual topics within the document planning the order of sections and topics how should you organize the sections and topics within your documents what comes first what comes later planning navigation which navigational devices should you provide in printed documents and in online help systems where should you provide links or cross references and where not audience technical writers development and use of a computer program which generates the matrices necessary for analysis of general aircraft structures for internal loads and deflections by the matrix force method is presented the force method matrix generator program is designed for use in conjunction with the format ii system as a user coded subroutine and as such will accommodate matrices of the order 2000 x 2000 up to six degrees of freedom may be considered at each joint in the structure which is idealized as an assembly of bar elements capable of resisting axial bending and torsional forces and rectangular or near rectangular panel elements resisting shearing forces and which is supported by discrete translational and rotational forces acting at the joints applied loading may be any combination of mechanical loads at the joints thermal loads resulting from bar element elongation due to temperature change and initial joint displacements the report includes a detailed description of the computer program operation and coding and a review of the matrix equations which employ the generated matrices and which are subsequently processed and solved by the format ii system to give internal loads and
