controlling where tasks run delegation and local actions by default ansible gathers facts and executes all tasks on the machines that match the hosts line of your playbook this page shows you how to delegate tasks to a different machine or group delegate facts to specific machines or groups or run an entire playbook locally local action is similar to delegate to localhost but because local action requires you to change the syntax of tasks it s better to always use delegate to that is while for a standard task you might write name copy a file copy src myfile dest path to myfile delegation rolling updates and local actions being designed for multi tier deployments since the beginning ansible is great at doing things on one host on behalf of another or doing local steps with reference to some remote hosts by default ansible gathers facts and executes all tasks on the machines that match the hosts line of your playbook this page shows you how to delegate tasks to a different machine or group delegate facts to specific machines or groups or run an entire playbook locally guide to ansible local action here we discuss how does ansible local action works along with commands and respective examples a common pattern is to use a local action to call rsync to recursively copy files to the managed servers here is an example tasks name recursively copy files from management server to target local action command rsync a path to files inventory hostname path to target these are the keywords available on common playbook objects keywords are one of several sources for configuring ansible behavior see controlling how ansible behaves precedence rules for details on the relative precedence of each source usage in your workflow steps uses actions checkout v2 uses jojoatxgme prepare local actions v1 uses github actions mylocalaction in github actions package json private true scripts build tsc dependencies actions core 1 2 4 actions exec 1 0 4 devdependencies the safest thing to do is to move the action locally which is very easy to do copy the relevant action code to github actions rclone or wherever you want in the repository update the uses clause to the new destination prefixed by uses github actions rclone local actions are a great way to create github actions that are tailored to how you want them to operate without having to manage yet another product release composite actions a composite action is one of three different types custom github actions that can be created composite javascript and docker noun an action as for trespassing that must be brought in the venue that has jurisdiction over the situs or is otherwise designated by law compare transitory action dictionary entries near local action local action local law see more nearby entries cite this entry style local action i am using version 8 6 5 is there a way to launch a local action from an activity sequence of events 1 click a button it has action set configured to a run a data transform 2 launch a local action i want to set some values in the data transform and then on the basis of the property value decide if i want to launch the local action or not by mobilizing youth led local action through country level national youth platforms and collaborating closely with the decentralized offices of the food and agriculture organization of the united nations fao the wff is empowering and catalyzing local youth leadership and action in changing the present and future of local agrifood systems fo action news jax dug through oliver s criminal history and found two other arrests for driving on a suspended license as well as other charges jacksonville ranks eighth in the country for initialize a repository in a local folder to initialize a new local git
