the book is a realistic blend of basic knowledge and understanding in soil physical properties it will enable the reader to scientifically analyze soils to develop practical and successful means of providing sufficient drainage and to develop science based irrigation strategies only basic mathematical knowledge is necessary to understand and apply the proven principles covered with limited resources that are increasing significantly in costs the book blends the ideal concept of providing sufficient drainage and irrigation based on using soil physical properties but with financial limitations in mind one traditional problem with many soil physics drainage and irrigations based texts is the prerequisite of understanding complicated calculus based mathematics although necessary for a theory based text our text was developed with practitioners in mind where such complicated mathematics was avoided but referenced if the reader wishes to further explore the specific topic another problem with many traditional texts is the lack of practical examples or case studies allowing readers to relate their specific scenarios to similar types of situations we have purposely included numerous examples and practical field experiences this is especially true when many of the theoretical ideals are covered followed by explanations of how such ideals can be applied in the laboratory and field the impact of humanity on the earth overshoots the earth s bio capacity to supply humanity s needs

people are living off earth's capital rather than its income however not all countries are equal and this book explores why apparently similar patterns of daily living can lead to larger and smaller environmental impacts the contributors describe daily life in many different places in the world and then calculate the environmental impact of these ways of living from the perspective of ecological and carbon footprints this leads to comparison and discussion of what living within the limits of the planet might mean current footprints for countries are derived from national statistics and these hide the variety of impacts made by individual people and the choices they make in their daily lives this book takes a bottom up approach by calculating the footprints of daily living the purpose is to show that small changes in behaviour now could avoid some very challenging problems in the future offering a global perspective on the question of sustainable living this book will be of great interest to anyone with a concern for the future as well as students and researchers in environmental studies human geography and development studies
