essay from the year 2011 in the subject cultural studies miscellaneous course interkulturelles management language english abstract if there is no love do what you will it only creates more misery those are roughly the words which have been spoken by a wise man the preaching of churches mosques temples and synagogues the philosophies culture gurus everything that is taught in schools academies and universities therefore seems utterly meaningless if it lacks that fundamental value of values and is bound to become counterproductive individually and socially over time no value can have any worth unless it is based on love without it no solution in any area of life can be truly and lastingly satisfactory

## **Self-Interest Vs. Altruism in the Global Era 2011-01-01**

this is the first collective study of the thinking behind the effective altruism movement this movement comprises a growing global community of people who organise significant parts of their lives around the two key concepts represented in its name altruism is the idea that if we use a significant portion of the resources in our possession whether money time or talents with a view to helping others then we can improve the world considerably when we do put such resources to altruistic use it is crucial to focus on how much good this or that intervention is reasonably expected to do per unit of resource expended as a gauge of effectiveness we can try to rank various possible actions against each other to

establish which will do the most good with the resources expended thus we could aim to rank various possible kinds of action to alleviate poverty against one another or against actions aimed at very different types of outcome focused perhaps on animal welfare or future generations the scale and organisation of the effective altruism movement encourage careful dialogue on questions that have perhaps long been there throwing them into new and sharper relief and giving rise to previously unnoticed questions in this volume a team of internationally recognised philosophers economists and political theorists present refined and in depth explorations of issues that arise once one takes seriously the twin ideas of altruistic commitment and effectiveness

no matter what we do however kind or generous our deeds may seem a hidden motive of selfishness lurks or so science has claimed for years this book whose publication promises to be a major scientific event tells us differently in *unto others* philosopher elliot sober and biologist david sloan wilson demonstrate once and for all that unselfish behavior is in fact an important feature of both biological and human nature their book provides a panoramic view of altruism throughout the animal kingdom from self sacrificing parasites to insects that subsume themselves in the superorganism of a colony to the human capacity for selflessness even as it explains the evolutionary sense of such behavior explaining how altruistic behavior can evolve by natural selection this book finally gives credence to the idea of group selection that was originally proposed by darwin but denounced as heretical in the 1960s with their account of this controversy sober and wilson offer a detailed case study of scientific change as well as an indisputable argument for group selection as a legitimate theory in evolutionary biology *unto others* also takes a novel evolutionary approach in explaining the ultimate psychological motives behind unselfish human behavior developing a theory of the proximate mechanisms that most likely evolved to motivate adaptive helping behavior sober and wilson show how people and perhaps other species evolved the capacity to care for others as a goal in itself a truly interdisciplinary work that blends biology philosophy psychology and anthropology this book will permanently change not just our view of selfless behavior but also our understanding of many issues in evolutionary biology and the social sciences

everyone is familiar with darwin s revolutionary idea about the survival of the fittest and most people agree that it works but darwin s famous theory has one major chink if life is about survival of the fittest then why would we risk our own life to jump into a river to save a stranger some people argue that issues such as charity fairness forgiveness and cooperation are evolutionary loose ends side issues that are of little consequence but as harvard s celebrated evolutionary biologist martin nowak explains in this ground breaking book cooperation is central to the four billion year old puzzle of life cooperation is fundamental to how molecules in the primordial soup crossed the watershed that separates dead chemistry from biochemistry cooperation is the key to understanding why language evolved an event that is as significant as the evolution of the first primitive organism the book also brings to light nowak s game changing work on disease cancer is fundamentally a failure of the body s cells to cooperate but organs are cleverly designed to foster cooperation and as nowak explains this new understanding can be used in novel cancer treatments in his first book for a wide audience this hugely influential scientist explains his cutting edge research into the mysteries of cooperation from the rise of multicellular life to good samaritans with wit and clarity martin nowak and the bestselling science writer roger highfield
