An Open Design for Computer-Aided Algorithmic Music Composition 2005

this dissertation introduces a new design for a computer aided algorithmic music composition system rather than exploring specific algorithms this study focuses on system and component design the design introduced here is demonstrated through its implementation in athenacl a modular polyphonic poly paradigm algorithmic music composition system in a cross platform interactive command line environment the athenacl system offers an open source object oriented composition tool written in python the system can be scripted and embedded and includes integrated instrument libraries post tonal and microtonal pitch modeling tools multiple format graphical outputs and musical output in csound midi audio file xml and text formats software design analysis is framed within a broad historical and intertextual study of the themes approaches and systems of computer aided algorithmic composition caac a detailed history of the earliest experiments as well as analysis of the foundational caac systems is provided common problems and interpretations of caac are then presented in a historical and intertextual context drawn from the writings and systems of numerous composers and developers toward the goal of developing techniques of comparative software analysis a survey of system design archetypes based on seven descriptors of caac systems is presented with this foundation athenacl system components are analyzed in detail system components are divided into abstractions of musical materials abstractions of musical procedures and system architecture for each component object models python examples and diagrams are provided further each component is given context in terms of its compositional implications and relation to alternative and related models from the history of caac

The academy 1895 the book presents the possibilities and realities of virtual worlds in education through the application of 3d virtual worlds to support authentic learning creativity learner engagement and cultural diversity in higher education it includes a unique variety of cross disciplinary approaches to research teaching and learning in a virtual world including analysis of data from the experiences of students in education law chinese language sustainability computer architecture business health and the arts the book provides unique learning experiences that have celebrated the rich media of virtual world environments through the utilisation of affordances such as simulation bots synchronous interaction machinima and games the perspectives come from australia and new zealand higher education academics but transferable to any higher educational institution in the sector worldwide and is significant to various disciplines in the higher education field

The Educational Times, and Journal of the College of Preceptors 1893 john carroll shows how a pervasive but underused element of design practice the scenario can transform information systems design difficult to learn and awkward to use today s information systems often change our activities in ways that we do not need or want the problem lies in the software development process in this book john carroll shows how a pervasive but underused element of design practice the scenario can transform information systems design traditional textbook approaches manage the complexity of the design process via abstraction treating design problems as if they were composites of puzzles scenario based design uses concretization a scenario is a concrete story about use for example a person turned on a computer the screen displayed a button labeled start the person used the mouse to select the button scenarios are a vocabulary for coordinating the central tasks of system development understanding people s needs envisioning new activities and technologies designing effective systems and software and drawing general lessons from systems as they are developed and used instead of designing software by listing requirements functions and code modules the designer focuses first on the activities that need to be supported and then allows descriptions of those activities to drive everything else in addition to a comprehensive discussion of the principles of scenario based design the book includes in depth examples of its application

Academy; a Weekly Review of Literature, Learning, Science and Art 1895 inside orcad goes beyond the reference guide supplied by orcad it contains an overview and introduction to modern schematic drafting with exercises intended to help the reader master the use of orcad via a hands on learning experience information that has been de emphasized in the manuals for recent orcad versions this introduction to orcad is designed to give easy access to practical information the command reference is a complete listing and explanation of the orcad commands and functions a series of appendices provide important tips and techniques and information about linking orcad to other computer aided design and computer aided engineering tools used in the electronics design process the enclosed disk contains a parts library for the tutorial exercises and several useful utilities making this book a valuable tool for the design engineer or engineering student chris
